FORTY-SEVENTH REPORT
TO THE
LEGISLATURE OF MASSACHUSETTS
RELATING TO THE
Registry and Return
OF
BIRTHS, MARRIAGES, AND DEATHS
IN THE
COMMONWEALTH,
FOR THE YEAR ENDING DECEMBER 31, 1888.
TOGETHER WITH THE REPORTS RELATING TO THE RETURNS OF
LIBELS FOR DIVORCE
AND TO THE RETURNS OF DEATHS INVESTIGATED BY THE
MEDICAL EXAMINERS,
FOR THE YEAR 1888.

PREPARED BY THE
SECRETARY OF THE COMMONWEALTH.

WITH EDITORIAL REMARKS BY
SAMUEL W. ABBOTT, M. D.

WRIGHT & POTTER PRINTING CO., STATE PRINTERS,
18 POST OFFICE SQUARE.
1889.

7658

July 3 1914

Nov. 26 1914

Commonwealth of Massachusetts.

SECRETARY'S DEPARTMENT, BOSTON, NOV. 1, 1889.

To the Honorable Senate and House of Representatives :

In conformity with the requirements of the Public Statutes, I have the honor to submit herewith the Forty-seventh Annual Registration Report, relating to the Births, Marriages and Deaths occurring in Massachusetts and registered in the several cities and towns during the year ending Dec. 31, 1888; also, in accordance with the provisions of chapter 194, Acts of 1882, and of chapter 379, Acts of 1885, the reports, respectively, relating to Libels for Divorce in the several counties, and to Returns of Deaths, the causes and manner of which have been investigated by the Medical Examiners during said period.

The present report, as those of the two previous years, has been edited by Dr. Samuel W. Abbott, Secretary of the State Board of Health, whose commentaries, and tabular statements illustrating the same, have added much to the interest and utility of the work. The following new features have been introduced into the present report, viz. : the Births, Marriages and Deaths, of colored, or other than white, given in supplements to tables II., VI. and VIII. ; in Table I., Nativities of deceased, for each city and town ; and in Table XV., Part 1 to Part 4, Nativities by state and counties, statistically arranged from the Returns of Births, Marriages and Deaths.

Very respectfully,

HENRY B. PEIRCE,

Secretary of the Commonwealth.

INDEX TO ABSTRACTS.

ABSTRACTS.

	PAGE
I.—GENERAL ABSTRACT.—Population of 1885.—Births, Marriages and Deaths registered in each county and town in 1888, distinguishing sex and parentage of Births, nativity of the Married, and sex, nativity and average age of Decedents,	2
II.—BIRTHS registered in 1888, by counties, by months, and by sex, . . .	16
<i>Supplement.</i> —Colored, by counties, etc.,	18
A.— <i>Supplement.</i> —Plurality Births registered in 1888, by counties, by months, and by sex,	20
B.— <i>Supplement.</i> —Illegitimate Births registered in 1888, by counties, by months, and by sex,	22
III.—STILL-BORN registered in 1888, by counties, by months, and by sex, . .	24
IV.—MARRIAGES registered in 1888, by counties and by months,	26
<i>Supplement.</i> —Colored, marriages of, in 1888,	28
V.—MARRIAGES registered in 1888, by counties and by age periods, . .	30
VI.—MARRIAGES registered in 1888, by ages and conjugal condition, . .	32
VII.—NATIVITIES of Grooms and Brides,	36
VIII.—DEATHS registered in 1888, by counties, by months, and by sex, . .	44
<i>Supplement.</i> —Colored, deaths of, by counties, by months, and by sex, .	46
IX.—DEATHS, exhibiting the age and sex of Deaths registered in each county and town in 1888, also Population of 1885, and Ratio of Deaths to Population,	48
X.—CAUSES OF DEATH, 1888, <i>nosologically</i> arranged, by months, by age, and by sex,	86
XI.—CAUSES OF DEATH, 1888, <i>nosologically</i> classified, by counties, . . .	110
<i>Note to preceding,</i>	120
XII.—COMPARATIVE MORTALITY.—Causes of death for <i>forty-seven</i> years; also for the last five years, <i>nosologically</i> classified, with ratios and percentages,	121
<i>Note on classification of infantile diseases,</i>	120
XIII.—CAUSES OF DEATH for each of the thirty-two years, 1857 to 1888, <i>nosologically</i> arranged,	132
XIV.—DEATHS FROM SEVERAL SPECIFIED CAUSES, 1888, by counties and by towns,	146
XV.—PARENT nativity of children; nativity of grooms and brides; nativity of deceased; and parent nativity of deceased; by State and counties, .	160
XVI.—OCCUPATIONS of fathers of children; of grooms; and of all the deceased,	168

TWENTY-FOUR YEARS' ABSTRACTS.—1865-88.

XVII.—GENERAL ABSTRACT.—Births, Marriages and Deaths registered in each city and town during twenty-four <i>years</i> , 1865-88, stating sex and average age of those deceased in each county during the period specified,	176

9	92	15	30	12	102	1	30	25	70	72

NOTE.—When a person is “found drowned” the case is classed under “accident or negligence.” (V.—1. 5.) Cases of death from cold, heat, drinking cold water, lightning, surgical operations and exposure are classed under “accident or negligence.” (V.—1. 7.) As “stricture of the urethra” is almost invariably the result of gonorrhœa, it is classed as (I.—2. 2).—[DR. FARR.]

NOTE.

Previously to the adoption, in the Registration Report of 1855, of the present NOSOLOGICAL ARRANGEMENT of tables XI. and XII., the term "Infantile" in those tables included under a single designation not only all deaths returned under the several heads "Infantile," "Premature," or "Premature Births," but also all ascribed to "Debility" or "Unknown" causes, if under two years of age.

This plan was continued until the Registration Report of 1868, in which, to secure greater accuracy, the method now employed was adopted, by which Deaths returned under the head of "Premature," "Premature Births," or "Infantile," are stated *separately* in tables IX. and X., and *combined* in tables XI. and XII. Deaths of children under two years, from "Debility" or "Unknown" cause, are no longer classed as "Infantile."

See Registration Report of 1868, p. cv, for a fuller explanation.

[illegible]

FORTY-SEVENTH REGISTRATION REPORT.

(1888.)

The following observations upon the Births, Marriages and Deaths registered in Massachusetts in 1888, are intended to present a summary of the statistics compiled in the office of the Secretary of State from the official returns received from the registration officers of the cities and towns. It is preceded by a condensed statement of the population as presented in the latest census of the State, that of 1885, together with an estimate of the population for the year 1888, since all deductions relative to rates of births, marriages and deaths must necessarily be founded upon the number of the population, as the most essential factor. Other important factors which are considered, are age, sex, nativity, seasons of the year, localities, and density of the population, and, in that division of the Report which relates to mortality, special prominence is given to the causes of death, and particularly to those causes which have sanitary significance, some of which are recognized as more or less preventable.

By the provisions of recent statutes, it is also required that the statistics of Divorces, and the Returns of the Medical Examiners relative to deaths by violence, shall be published in the Registration Report.

The number of births returned by the Registration Officers of Massachusetts for the year 1888 was 54,893, the number of marriages was 19,739, and of deaths 42,097, or 1,719 more births, 206 more marriages, and 1,334 deaths than were recorded in 1887.

The aggregate registration, including 1,943 still-births, was 118,672, which was 3,408 greater than that of 1887.

The excess of living births over the deaths was 12,796, which was 385 greater than that of 1887, and was also greater than that of any year since 1874, except 1886.

The approximate rates for 1888 were as follows, upon an estimated population of 2,044,506 : —

Birth-rate,	26.85	to 1,000	of the estimated population.
Marriage-rate (Marriages),	9.65	"	"
(Persons Married),	19.31	"	"
Death-rate,	20.59	"	"
Excess of births over deaths,	6.26	"	"

These rates would indicate, upon the estimated population, one child born alive to 37 persons, one person married to 52 persons, and one death to 48 living persons.

The same data also indicate a daily average of 150 births, 54 marriages, and 115 deaths, during the year 1888.

In table 1 are presented the population, the number of births, marriages and deaths, the excess of births over deaths, the birth, marriage and death rates, and the natural rate of increase of the population for a period of thirty-nine years. By this table it appears that the birth-rate of 1888 was greater than that of any year since 1874, and with three exceptions (1872, 1873, 1874) greater than that of any year since 1860.

* TABLE 1. — *Births, Marriages and Deaths, with the Population and Rates, 1850-1888.*

* 8.3, excluding the three years most influenced by the war.

In periods of five years, the excess of our birth-rates over death-rates shows a gradual diminution, that for the period between 1880 and 1885 being the lowest for thirty-five years.

The estimated excess for the years 1885, 1886 and 1887 is considerably greater than the average excess of the period of five years (1881–1885).

Table 3 exhibits the birth, death and marriage rates of several European countries having registration, together with the natural increase for a series of years, or the excess of the birth-rate over the death-rate.

The table also shows that for the period of twenty years (1861–1880) Massachusetts shows a smaller rate of increase than those of the European countries quoted, except France and Hungary.

For 1888 the natural rate of increase of Massachusetts was greater than those of either France or Ireland.

The marriage-rate of Massachusetts in 1888 was greater than those of either of the countries included in the table, and for the twenty-year period, 1861–1880, it was only exceeded by that of Hungary.

These data are from the most authentic sources, including the Registrar-General's Report of England for 1887, and from the very full and complete tables of Professor Bodio of Milan.

POPULATION.

The population of Massachusetts for the year 1885, the year of the State census, was found to be 1,942,141. For the intervening years, between the dates of the State and national census, such methods must be employed for estimating the population as will secure the most accurate results. For this purpose the method adopted by the Registrar-General of England is employed, which is based upon the supposition that the annual rate of increase which had prevailed from 1875 to 1885 was also maintained to the middle of the year 1888.

This method appears to be the most reasonable and the least open to criticism. The cause which is most liable to introduce inaccuracy in the results obtained by this method is a difference in the rate of immigration and emigration in successive years.

The population for the year 1888, estimated by the rate of increase for ten years, was 2,044,506.

The changes in population from 1765 to 1885, together with the annual rates of increase, as shown by the colonial, national and State census enumerations, are given in the following table:—

TABLE 4. — *Population of Massachusetts and Annual Rates of Increase, 1765-1865, compiled from Colonial, United States and State Census Reports.**

* Census of Massachusetts. Part I. 1885; p. 78.

The following table (5) gives the number of persons living at each age-period for the census years 1865, 1870, 1875, 1880 and 1885, and also the average number for each age-period for the five census years.

In the diagram on page 241 the same data are presented, for the census year 1885, for each of the age-periods of five years each from birth to one hundred years. The scale is that of one million inhabitants. For example, at the age-period twenty to twenty-five years, there were living, at the date of the census of 1885, in Massachusetts, 46,480 men and 56,100 women in each million of the population.

The value of this table will be seen by reference to the table of principal infectious diseases on page 349.

BIRTHS.

The number of births registered in 1888 was 54,893, which was larger than that of any year since the beginning of registration in Massachusetts; and the rate for living births, as calculated from the estimated population (26·85), was also larger than that of any year since 1874. It was consequently larger than the average rate of either of the five-year periods (1876–1880 and 1881–1885).

The rate was also less than those of the periods 1856–1860 and 1871–1875, but was greater than that of the period which included the years of the Rebellion (1861–1865), and also that of the period immediately following (1866–1870). In table 6 are presented the number of births and of still-births for a period of twenty years, and in table 7 the birth-rates for thirty-two years, in groups of five years each.

TABLE 6. — *Births for Twenty Years.*

			1888, . . .	26.85	

The birth-rate of Europe, exclusive of Russia (1865–1883), was 35.4 to 1,000 of the living population; that of Russia for the same period was 49.4, and that of all Europe was 38.7.

The four European groups rank as follows:—

Eastern Europe (Russia),	49.4
Central Europe,	37.6
Southern Europe,	34.0
North-western Europe,	32.0

The countries having the highest and the lowest birth-rate are as follows:—

	Highest.		Lowest.
1. Russia, 1867–78, . . .	49.4	5. Sweden, 1865–82, . . .	30.2

Average,	44.8	Average,	29.0

In table 8 are presented the numbers of births by counties for a period of twenty-four years, and the birth-rates of census years.

In this table the births and birth-rate of each county for any given year may be compared with those of other counties, and with those of the State for the same year, and also with the births and birth-rates of the same county in other years.

These tables show a considerable degree of uniformity in the birth-rates of different counties when the death-rates of the same counties are compared for different census years, while the birth-rates of counties present marked variations when compared with each other, Suffolk County having the highest rates and Dukes and Nantucket the lowest.

As compared with the births for 1887, there was an increase in every county except Dukes, Franklin and Nantucket.

* Excluding births in State Almshouse.

Density of Population. — In table 9 are presented the data relative to the birth-rates of cities and towns grouped according to the population.

The birth-rates of cities, estimated in census years only, increased from 25.71 in 1865 to 29.70 in 1875, and then diminished to 27.59 in 1885.

In the remainder of the State the birth-rate diminished from 25.56 in 1870, to 21.53 in 1880, and then increased to 21.97 in 1885. The statistics of Quincy and Woburn are specified in

this table in addition to those of the previous year, these municipalities having become cities since the date of the forty-sixth report.

This diagram is intended to show the comparative number of births which occurred in each month of 1888.

TABLE 10. — *Births and Birth-rates, by Months and Quarters, 1887-1888.*

Seasons of the Year. — In tables 10 and 11 is shown the relation of the birth-rate to seasons of the year; in the former table the data of 1888 being compared with those of 1887,

by months and quarters, and in the latter the numbers of births in each month are presented for a period of twenty years.

The largest number of births in a single month in 1888 occurred in July and in the third quarter of the year, and the least number occurred in April and in the second quarter.

The statistics embraced in table 10 are illustrated by the diagram on the opposite page.

	21,057						23,563					

For the period of twenty years (1869–1888), 52.81 per cent. of the births occurred in the last half of the years of the period ;

23·59 per cent. occurred in the first quarter; 23·60 per cent. in the second quarter; 26·56 per cent. in the third quarter, and 26·25 in the last quarter of the same years.

The largest average number of births for the period of twenty years occurred in the month of August. The order of the remaining months was as follows: October, December, September, July, November, March, June, January, May, April, February.

	{ Not stated, . .	—	—	51
	Males to 100 females, . .	97·4	100·	102·8

Sex. — The statistics presented in table 12 relative to the sex of children born in 1888, differ but little from those of 1887, or from the average of the previous thirty-five years.

The ratio of males to females in 1888 was 105·4, as compared with 105·2 in 1887 and 104·6 in 1886, and 105·7 for the period 1853-1887. This agrees quite closely with that of Europe, which was 105·5 for the nineteen years (1865-1883).

The disparity of the sexes among the still-born was greater than among living children, the ratio of males to females in 1888 being 151, as compared with 142·6 in 1887, 144·4 in 1886, and 146·6 for the period 1853-1887.

The number of males and females among the illegitimate

births was equal, while the ratios in previous years were as follows: 97·4 in 1887, 117·7 in 1886, and 102·8 for the period 1853–1887.

In table 13 are presented the statistics relative to the parentage of children born alive in Massachusetts in 1888, together with those relating to the parentage of plural and of illegitimate births.

The excess of children born of foreign parents over those of native parentage was 2,912, which was greater by 338 than the excess of the same class in 1887. It was also greater than that of any year since 1875, when the excess was 2,975.

The number born of mixed parentage was 11,555, which was 1,677 greater than that of 1887, and also greater than that of any previous year.

The excess of native over foreign births was as follows:—

In Barnstable County,	4·44 to one.
Berkshire	"	1·57 "
Dukes	"	5·57 "
Essex	"	1·08 "
Franklin	"	1·66 "
Hampshire	"	1·34 "
Nantucket	"	15 "
Norfolk	"	1·43 "
Plymouth	"	2·59 "

The excess of foreign over native births was as follows:—

In Bristol County,	1·58 to one.
Hampden	"	1·36 "
Middlesex	"	1·21 "
Suffolk	"	1·65 "
Worcester	"	1·23 "

In all of the counties first named there was an increase in the ratio of excess as compared with 1887, except in Essex, Nantucket and Plymouth. There was also an increase in the ratio of excess of foreign over native births in Middlesex, Suffolk and Worcester counties, as compared with 1887.

There was also an increase, in every county except Franklin, in the number of children who were born of mixed parentage. In Suffolk County this excess amounted to 945, and in Middlesex to 172.

One parent foreign,	3.26	7.05	8.42	10.98	14.18	17.00	19.18	21.15

In tables 14 and 15, the percentages of native and foreign born children are given for a series of years, by which it appears that the percentage of native-born children has decreased with considerable uniformity since 1879, and was also less in 1888 than in any year since the beginning of registration.

The percentage of children born of foreign parents was less than that of 1887, but greater than that of any previous year since 1878.

The percentage of children born of mixed parentage was greater than that of any previous year.

If the number of births of mixed parentage be equally distributed among the native and the foreign births, the birth-rate of the native population for 1888, estimated on the census of 1885, was 18.3 per 1,000 of the living population, and that of the foreign population was 54.6 per 1,000.

Plural Births. — In 1887, 878 children were born of 437 mothers. Of this number 868 were twins, 6 were triplets and one case of quadruplets was reported.

The number of the offspring of plural births in 1888 was less than those of 1884, 1886 and 1887, but greater than that of 1885. The percentage of those born of native parentage was greater than that of any previous year except 1878, since 1870. The percentage of those born of foreign parentage was the same as that of native-born twins, and was slightly larger than that of 1887, but less than that of any previous year of the twenty-year period (1869-1888). The percentage of those born of mixed parentage was less than that of 1887, but greater than that of any previous year.

Ratio of Plural Births. — In the data presented in table 18, for the period of twenty years (1869–88), the ratio of twin and triplet births to the whole number of births which occurred in 1888 was less than the average number of the whole period.

In one case, which occurred in 1888, four children were born at a single birth.

Illegitimate Births. — The number of illegitimate births registered in 1888 was 1,058, which was 19·3 per 1,000 of the whole number of living births in that year. This number was 2·5 per 1,000 less than the number reported in 1887, 1 per 1,000 less than that reported in 1886, and but ·3 per 1,000 greater than the average of the ten years, 1879–1888, and 3·3 greater than the average of the twenty years, 1869–1888.

Illegitimate Births. — Nativity of Mothers. — In table 20 are presented the statistics relative to the nativity of mothers of illegitimate children for a period of twenty years.

The ratio of such children born of native mothers in 1888 was 46·8 per cent., which was greater than that of 1887 by 1·6 per cent., but less than that of any other year since 1875, and also less by 4·5 per cent. than the average of the twenty years (1869–1888).

The ratio of such children born of foreign mothers was 50·3 per cent., which was greater than that of 1887, and also greater than that of any previous year since 1875, and also greater by 8·2 per cent. than the average of the twenty-year period.

TABLE 21. — *Ratio of Illegitimate Children born in the Several Counties to the Total Number of such Births, — 1888.*

COUNTIES.	Population, 1885.	Numbers, 1888.	Percentages, 1888.
Barnstable,	29,845	14	1·32
Berkshire,	73,828	29	2·74
Bristol,	158,498	54	5·10
Dukes,	4,135	2	·19
Essex,	263,727	85	8·04
Franklin,	37,449	9	·85
Hampden,	116,764	33	3·12
Hampshire,	48,472	9	·85
Middlesex,	357,311	143	13·52
Nantucket,	3,142	2	·19

Plymouth,	81,680	14	1·32
Suffolk,	421,109	593	56·05
Worcester,	244,039	59	5·58
THE STATE,	1,942,141	1058	100·00

In table 21 are presented the percentages of illegitimate births in each county as compared with the whole number in the State.

Of the whole number, 56·05 per cent. were born in Suffolk County, as compared with 63·04 per cent. in 1887, and 61·61 in 1886; and 13·52 per cent. in Middlesex County, as compared with 14·25 in 1887, and 11·32 in 1886. A majority of these births occurred at public, State and municipal institutions in these counties.

The percentage of such births had also diminished in Frank-

lin, Hampden and Hampshire counties, but had increased in the remaining counties, as compared with the total number and the statistics for 1887.

In table 22 is presented the nativity of illegitimate births by counties for 1888, and also for the period of ten years (1879-1888). The highest percentage of such births of native-born mothers occurred in Barnstable, Dukes, Nantucket and Hampshire counties, both for 1888 and for the ten-year period, and the lowest in Middlesex and Suffolk, for the same years.

In table 23 are presented the statistics relative to the ratio of illegitimate births to each thousand living births by counties for the period of ten years (1879-1888), by which it appears that Suffolk County presented the highest ratio for the whole period (44 per 1,000), that of Dukes and Nantucket being next in order, while the lowest ratios were found in Worcester and Norfolk counties (6·8 and 7·0, respectively).

In the year 1888, Suffolk County had the highest ratio (44·5) and Nantucket the next (43·5), while Norfolk County presented the lowest (4·8). Hampden, Hampshire, Plymouth and Worcester presented nearly identical ratios (8·5, 8·4, 8·4 and 8·3 per 1,000 births, respectively).

MARRIAGES.

The number of marriages registered in Massachusetts in 1888 was 19,739, which was 206 more than the number registered in 1887, and 1,721 more than that of 1886, and was also greater than that of any previous year. The number of persons married for each thousand of the estimated living population was 19·31, and the number of marriages was 9·65.

There was one person married to every 51·8 of the estimated population, as compared with one in each 51·4 in 1887 and 54·8 in 1886.

TABLE 24. — *Marriage-rates, — 1855–1888.*

1872, .	16,142	21·07	95				

The marriage-rate of 1888, as calculated from the estimated population, was ·89 greater than the average of the past twenty years. It was also ·79 greater than the average of the decade

1869-1878, and $\cdot97$ greater than that of the decade 1879-1888. It was also $\cdot43$ greater than the average of the period of thirty-four years represented in the table (1855-1888.)

The following table (25) presents the number of marriages in each county for each year in the period of ten years, 1879-1888, together with the marriage-rates, or number of marriages per 1,000 living, for the census years 1875, 1880 and 1885:—

In table 26 are presented the marriage-rates in census years of each city and of each group of towns of similar population from 1865 to 1885 inclusive, together with the number of marriages for 1888 in each city and group of towns.

In each of the cities except Cambridge, Fall River, Lawrence, Taunton, Haverhill, Malden, Northampton, Waltham and Quincy, the number of marriages registered was greater than that of 1887, and the whole number registered in the cities exceeded that of 1887 by 225.

In the remainder of the State the number was nearly the same as that of 1887, allowance being made for the two cities incorporated since the date of the last report.

This diagram is intended to show the relative number of marriages which occurred in each month of 1888.

TABLE 27. — *Marriages and Marriage-rates by Months and Quarters, 1887-1888.*

The four { quarters, }	19,533	19,739	19,533	19,739	100.00	100.00	100.00	100.00

The statistics presented in table 27 are illustrated in the diagram above.

In tables 27 and 28 are presented the relation of the marriage-rates to the season of the year; in the former table, by months and quarters, with the percentages for each for 1887 and 1888, and in the latter table by quarters for a period of ten years. The greatest number of marriages was recorded in November, and in the last quarter of 1888; and the least number in March, and in the first quarter. The order of preference, with reference to the four quarters of the year, was as follows: fourth, second, third, first. The average of the ten years (1879-1888) shows the same characteristic, which also appears in the English registration tables for a period of fifty years.

Table 29 presents a summary statement of the numbers of persons married at different ages of life, classified by sexes and also according to their conjugal condition at the time of marriage.

The number of men married under 20 years of age was 1.9 per cent. of the whole number of men married, which was also the percentage of the same class for each of the two previous years; and the number of women married who were under 20 was 16.3 per cent. of the whole number, as compared with 16.2 in 1887.

The number of men married who were between the ages of 20 and 25 was 35.7 of the whole number, and the number of women married at the same age was 44.7 per cent., as compared with 35.3 and 44.4 in 1887.

1881, . . .	28.8	25.1	26.5	23.9
1882, . . .	29.2	25.4	26.5	23.9
1883, . . .	28.8	25.3	26.6	23.4
1884, . . .	29.1	25.1	26.6	24.1
1885, . . .	29.2	25.3	26.8	24.2
1886, . . .	28.9	25.3	26.9	24.2
1887, . . .	29.0	25.5	26.8	24.4
1888, . . .	28.9	25.5	26.8	24.4

Between the ages of 25 and 30 years the men who were married in 1888 were 33.4 per cent., and the women were 23.1 per cent. of the whole number, as compared with 33.7 per cent. and 23.4, respectively, in 1887. Between the ages of 30 and 40 the men were 20 per cent. and the women were 11.6 per cent., as compared with 19.7 and 11.6 per cent., respectively, in 1887.

Six hundred and ninety-three men and 245 women were married after having attained the age of 50 years; 19 men and 5 women were over 75 years of age at the time of marriage, and 7 men and 2 women were over 80.

In table 30 are presented the average ages at the time of marriage of all persons of both sexes for a period of eighteen years, and of persons married for the first time for the same period. The average ages of these classes of persons for 1888 are almost identical with those of 1887. The only difference is presented in the average age of all bridegrooms, which was 29 years in 1887 and 28.9 in 1888.

The variations for the whole period of eighteen years do not in any case exceed one year between the maximum and minimum ages.

Table 31 is introduced for the purpose of presenting the number of persons under 20 years of age who contracted marriage in 1888. The total number of males was 368, and of females 3,218. Two females were 12, 2 were 13, 12 were 14 and 51 were 15 years of age. One male was 15, and there were none under that age.

In table 32 is presented a statement of the number of persons who were married in 1888, with reference to their conjugal condition, by which it appears that 16,185 bachelors married maids, and 850 married widows; 1,763 widowers married maids, and 939 married widows.

The number of widowers who were married in 1888 was 2,702; the number of widows married was 1,789.

	{ Females, .	90.93	8.65	.38	.03	—	—	.01

In table 33 are presented the percentages of first and subsequent marriages for a period of eighteen years, by which it appears that the percentage of first marriages in 1888 was 86.3

for men and 90·93 for women, which was but a fraction of one per cent. greater than the corresponding ratios of 1887. The ratios of marriages of widows and widowers were generally less than those of 1887.

TABLE 34. — *Marriages according to Nativity. — Percentages for Twenty Years.*

YEARS.	Both Parties Native Born.	Both Parties Foreign Born.	Native-born Groom and Foreign-born Bride.	Foreign-born Groom and Native-born Bride.	Not stated.

1887, . . .	49·85	29·02	11·55	9·56	·02
1888, . . .	48·03	30·61	11·64	9·67	·04

In table 34 are presented the percentages, for a period of twenty years, of marriages, with reference to the nativity of groom and bride. By this table it appears that there was a decrease in the percentage of the native-born from 1869 to 1873, an increase from 1873 to 1879, and then a decrease up to 1888. The percentages of the foreign-born, with a few exceptions, varied inversely as the former.

In the class of marriages of persons of mixed parentage, there has been an increase with considerable uniformity in the whole period, especially in the class entitled native-born grooms and foreign-born brides.

Similar contrasts are presented in table 35, in which all persons married are classified in two groups with reference to their nativity.

TABLE 35. — *Proportion of Native to Foreign born Persons Married.**

* Percentages exclude marriages where the nativity was not recorded.

In table 36 are presented the percentages of native and foreign born persons married, by counties, for a period of ten years, wherein it appears that the counties in which occurred the greatest percentage of marriages of native birth in 1888 were Nantucket, Dukes, Barnstable and Plymouth, and those in which the least percentage of such marriages occurred were Suffolk, Bristol, Middlesex and Hampden, in the order named.

TABLE 36. — *Percentages of Native and Foreign born Persons Married, by Counties, 1879-1888.*

DIVORCES.

The statute causes for which divorce from the bonds of matrimony may be granted in Massachusetts are as follows : —

1. Adultery.
2. Impotency.
3. Sentence to imprisonment at hard labor for five years or more.
4. Desertion for three consecutive years next prior to the filing of the libel.
5. Separation without consent, refusal to cohabit, and union for three years with a religious sect or society holding the relation of husband and wife unlawful.
6. Extreme cruelty.
7. Gross and confirmed habits of intoxication.
8. Cruel and abusive treatment.
9. Neglect to provide.
10. Gross and confirmed drunkenness from opium or other drugs.

Of these causes, the one relating to union with a religious sect holding the relation of husband and wife unlawful is practically inoperative, since no divorces have been granted upon this ground for the past twenty-three years at least.

A marriage may be annulled, and declared void, as provided by the statutes, in consequence of violation of the provisions of the laws concerning marriage. (Pub. Stats., chap. 145, sect. 11.)

The following statute relative to the granting of divorces was enacted by the Legislature of 1889.

[Chapter 447, 1889.]

AN ACT TO PERMIT THE GRANTING OF DIVORCES IN CASES OF THE EXCESSIVE USE OF OPIUM OR OTHER DRUGS.

Be it enacted, etc., as follows :

A divorce from the bonds of matrimony may be decreed for gross and confirmed drunkenness caused by the voluntary and excessive use of opium or other drugs. [Approved June 7, 1889.]

The tables (pages 281–296) present the principal data relative to the divorces granted in Massachusetts during the period of twenty years ending with 1888. The statistics presented specify the number for each county, the sexes in favor of which divorces were granted, and the causes for which they were granted.

During the period embraced in these tables (1869–1888), 10,723 divorces were granted, which was 285 more than the number granted in the twenty years ending with 1887.

Sex. — Of the whole number, 7,412, or 69·12 per cent., were granted on complaint of the wife.

Of the divorces granted on account of adultery, 53·4 per cent. were decreed to the wife; of those on account of desertion, 64·1 per cent.; of those on account of intoxication, 89·1 per cent.; of those on account of extreme cruelty, 99·3 per cent.; of those on account of cruel and abusive treatment, 98·6 per cent.; and of those on account of non-support, 100 per cent.

Causes. — Of the whole number of divorces granted in the period of twenty years ending with 1888, 3,037, or 28·3 per cent., were granted on account of adultery; 4,834, or 45·1 per cent., on account of desertion; 1,242, or 11·6 per cent., on account of intoxication; 571, or 5·3 per cent., on account of extreme cruelty; 739, or 6·9 per cent., on account of cruel and abusive treatment; 220, or 2·05 per cent., on account of non-support.

Counties. — The greatest number of divorces in any county, during the twenty years, was granted in Suffolk, or 26 per cent. of the total number; Middlesex had 15·2 per cent.; Essex, 14·8 per cent.; and Worcester, 12·6 per cent.

The counties having the smallest number were Dukes and Nantucket, which had ·5 per cent.; Franklin, 1·7 per cent.; and Barnstable, 1·8 per cent. These ratios vary but little from those of the twenty years ending with 1887.

The percentage of divorces granted on account of adultery, as compared with the total number decreed in each county, was as follows, for the twenty years ending with 1888, beginning with the county having the highest percentage: —

Franklin,	41·3	Norfolk,	26·7
Berkshire,	32·6	Hampshire,	26·5
Suffolk,	29·9	Worcester,	26·3
Middlesex,	29·5	Hampden,	25·1
Bristol,	29·1	Plymouth,	19·8
Barnstable,	27·6	Dukes and Nantucket,	15·4
Essex,	27·5		

For desertion, the percentages were as follows : —

Barnstable,	61·5	Franklin,	45·6
Dukes and Nantucket,	55·8	Hampden,	44·5
Plymouth,	53·9	Bristol,	44·4
Norfolk,	50·9	Middlesex,	44·3
Hampshire,	49·0	Berkshire,	41·6
Essex,	46·8	Suffolk,	41·3
Worcester,	46·6		

For intoxication, the percentages were as follows : —

Hampden,	14·7	Dukes and Nantucket,	9·6
Suffolk,	14·0	Plymouth,	8·2
Essex,	12·4	Berkshire,	7·6
Middlesex,	11·3	Hampshire,	5·1
Worcester,	10·5	Franklin,	4·9
Norfolk,	10·3	Barnstable,	2·1
Bristol,	10·1		

For extreme cruelty, the highest ratios, as compared with the total number granted in each county for the period of twenty years, were found in Dukes and Nantucket, 9·6 ; in Barnstable, 8·3 ; and in Berkshire, 7·2 ; and the lowest in Franklin, 2·7, and in Norfolk, 3·6 per cent.

For cruel and abusive treatment, the highest ratios for the same period were found in Plymouth, 11·6, and in Hampshire, 10·7 ; and the lowest in Essex, 4·8, and in Franklin, 4·9 per cent. No divorces were granted for this cause in Barnstable County, and but one was granted in the same county for refusal or neglect to provide maintenance.

In table 37 are presented the ratios of divorces to marriages in each year, for the period of twenty years ending with 1888. The ratio for the entire period was one to 29·8. The highest ratio was one to 21·4 in 1878, and the lowest, one to 48·4 in 1871.

For the year 1888, it was one to 30·6, which was lower than that of any year since 1882.

The average marriage rate for the twenty years (1869–1888) was 18·42 per 1,000 of the population. For the ten years (1869–1878) it was 18·52, and for the following decade (1879–1888) it was 18·34, a decrease of ·18 per 1,000 of the population.

Comparing the same periods with reference to the ratio of divorces to marriages, it appears that there was an increase from one in 30·7 in the former period to one in 29 in the latter.

TABLE 37. — *Ratio of Divorces to Marriages. — Twenty Years.*

* Estimated.

In table 38 is presented the ratio of divorces to marriages in each county for a period of twenty years. The best record is that of Norfolk County, one to 51·4. The next in order are Hampshire, Middlesex and Plymouth, which present, respectively, ratios of one to 38·2, one to 34·9, and one to 32·6. The highest ratios are those presented by Dukes and Nantucket counties, Berkshire and Hampden, one to 24·4, one to 24·9 and one to 25·4.

* Of this total, seven were for other causes; see preceding table.

In table 55 the divorces for twenty years are presented by counties and by causes, the ratio of the number from each cause being given, as compared with the total number of marriages in each county for the same period.

By this classification it appears that the relative rank of the counties was as follows, the counties having the least number of cases from the specified causes being at the top of each column, and those having the greatest number at the bottom : —

Adultery.	Desertion.	Intoxication.	Extreme Cruelty.	All Other Causes.
1. Norfolk.	Norfolk.	Barnstable.	Norfolk.	Barnstable.
2. Plymouth.	Middlesex.	Hampshire.	Franklin.	Norfolk.
3. Dukes and Nantucket.	Hampshire.	Franklin.	Plymouth.	Essex.
4. Hampshire.	Suffolk.	Norfolk.	Hampshire.	Franklin.
5. Middlesex.	Franklin.	Plymouth.	Middlesex.	Middlesex.
6. Worcester.	Bristol.	Berkshire.	Suffolk.	Suffolk.
7. Essex.	Essex.	Middlesex.	Worcester.	Bristol.
8. Barnstable.	Plymouth.	Bristol.	Hampden.	Hampshire.
9. Hampden.	Worcester.	Worcester.	Bristol.	Worcester.
10. Bristol.	Berkshire.	Dukes and Nantucket.	Essex.	Hampden.
11. Suffolk.		Essex.	Berkshire.	Plymouth.
12. Franklin.	Hampden.	Suffolk.	Barnstable.	Berkshire.
13. Berkshire.	Barnstable.	Hampden.	Dukes and Nantucket.	Dukes and Nantucket.

In tables 56 and 57 are presented the statistics relative to divorces in Massachusetts for the year 1888. The whole number of divorces granted in 1888 was 624, which was 172 less than the number granted in 1887, 23 more than those of 1886, 22 less than those of 1885, and 88 more than the average of the twenty years, 1869–1888. Of the whole number granted in 1888, 126, or 20·1 per cent., were granted on account of adultery, as compared with 22·5 per cent. in 1887, 20·8 per cent. in 1886, 23·4 per cent. in 1885, and 28·3 per cent. for the whole period of twenty years ending with 1888.

The percentage for desertion in 1888 was 48·7, as compared with 49·9 in 1887, 45·7 in 1886, and 45·1 as the annual average for the whole period of twenty years.

For intoxication, the percentage in 1888 was 14·2, as compared with 13·9 in 1887, 16·3 in 1886, and 11·6 as the annual average.

For extreme cruelty, the percentage in 1888 was 3·5, as compared with 2·0 in 1887. For cruel and abusive treatment,

the percentage was 9·4; and for neglect or refusal to provide support, it was 1·9.

These ratios are, as compared with the annual averages for twenty years: for adultery, 8·1 per cent. lower; for desertion, 3·6 per cent. higher; for intoxication, 2·7 higher; for extreme cruelty, 1·8 lower; and for cruel and abusive treatment, 2·6 higher.

Of the whole number, 432, or 69·2 per cent., were granted on complaint of the wife, as compared with 69·7 per cent. in 1887, 70 per cent. in 1886, and 69·1 per cent. for the period of twenty years (1869–1888).

Of the divorces decreed on account of adultery, 43·7 were granted to women, as compared with 51·4 in 1887, and 53·6 in 1886.

Of those which were granted on account of desertion, 65·5 per cent. were granted to women, as compared with 65·2 in 1887.

Of those granted on account of intoxication, 86·5 per cent. were granted to women, as compared with 89·2 in 1887.

All of the divorces on account of extreme cruelty, and all except three of those decreed on account of cruel and abusive treatment, were granted to women.

Comparing the relative rank of the counties with reference to the number of divorces granted in each for the past five years, Suffolk had the greatest number in each year; Middlesex was the second in order in 1884, 1885 and 1886, third in 1888, and fourth in 1887; Essex was second in 1887 and 1888, third in 1885, fourth in 1884, and fifth in 1886; Worcester, second in 1883, third in 1884, 1886 and 1887, and fourth in 1885 and 1888. The remaining counties occupied nearly the following order for the past five years: Bristol, Hampden, Norfolk, Berkshire, Plymouth, Barnstable, Franklin, Hampshire, Dukes and Nantucket.

The greatest percentage of divorces for adultery in 1888 was granted in Norfolk County; the greatest for desertion, in Franklin; for intoxication, in Hampshire; for extreme cruelty, in Plymouth; for cruel and abusive treatment, in Dukes and Nantucket, and for neglect to provide support, in Barnstable.

The number of divorces granted in 1888 was less in nearly all of the counties than those of 1887, the counties having a greater number being Barnstable, Dukes and Nantucket and Plymouth.

As compared with the total number granted in each county, the following summary shows the relative rank of each county, for the prominent causes, for 1888 :—

ADULTERY.			DESERTION.			INTOXICATION.		
Barnstable,	. . .	30.0	Franklin,	. . .	100.0	Hampshire,	. . .	10.0
Norfolk,	. . .	27.8	Dukes and Nant'ket,	. . .	66.7	Hampden,	. . .	20.0
Essex,	. . .	25.2	Essex,	. . .	60.2	Suffolk,	. . .	19.9
Berkshire,	. . .	23.8	Hampshire,	. . .	60.0	Middlesex,	. . .	14.8
Suffolk,	. . .	22.2	Middlesex,	. . .	55.6	Berkshire,	. . .	14.3
Plymouth,	. . .	21.9	Plymouth,	. . .	53.1	Worcester,	. . .	13.9
Worcester,	. . .	20.8	Hampden,	. . .	50.0	Bristol,	. . .	12.5
Bristol,	. . .	19.6	Norfolk,	. . .	50.0	Norfolk,	. . .	11.1
Hampden,	. . .	14.0	Bristol,	. . .	48.2	Barnstable,	. . .	10.0
Middlesex,	. . .	11.1	Suffolk,	. . .	42.7	Essex,	. . .	7.8
Dukes and Nant'ket,	. . .	-	Worcester,	. . .	41.7	Dukes and Nantucket,	. . .	-
Franklin,	. . .	-	Barnstable,	. . .	40.0	Franklin,	. . .	-
Hampshire,	. . .	-	Berkshire,	. . .	23.8	Plymouth,	. . .	-

The whole number of libels for divorce disposed of in 1888 was 669, of which number, 581, or 86.9 per cent., were not contested, this ratio differing but little from that of 1887, for the same class of cases (86.2 per cent.).

Percentage of Uncontested Cases—by Causes.

	1887.	1888.
For adultery,	83.4	84.5
desertion,	89.8	92.9
intoxication,	92.9	82.1
extreme cruelty,	73.9	72.0
cruel and abusive treatment,	69.3	73.4
neglect to provide support,	75.0	91.7

Percentage of Successful Cases—by Causes.

For adultery,	95.7	92.7
desertion,	94.5	93.8
intoxication,	98.2	93.7
extreme cruelty,	69.6	88.0
cruel and abusive treatment,	93.3	92.2
neglect to provide support,	80.0	100.0
Percentage of all successful cases,	94.4	93.4

In 552 cases the libels were dismissed, which was a much larger number than that of the same class of cases in 1887 (304). Of the whole number of dismissed libels, 36 were dismissed by agreement, 334 for want of prosecution, 13 in consequence of death of one of the parties, and 169 for other and unspecified causes.

As compared with the number of marriages in the State, the number of divorces in 1888 was as one to 31·6, as compared with one to 24·5 in 1887; one to 30·0 in 1886; one to 26·4 in 1885; one to 28·2 in 1884, and one to 30·0 for the twenty years ending with 1887. (Table 58.)

TABLE 58. — *Ratio of Divorces to Marriages, by Counties. — 1888.*

COUNTIES.	Number of Marriages.	Number of Divorces.	Ratio of Divorces to Marriages.
Barnstable,	257	10	1 to 25·7
Berkshire,	594	21	1 to 28·3
Bristol,	1,656	56	1 to 29·6
Dukes and Nantucket,	47	3	1 to 15·7
Essex,	2,649	103	1 to 25·7
Franklin,	290	2	1 to 145·0
Hampden,	1,210	50	1 to 24·2
Hampshire,	368	5	1 to 73·6
Middlesex,	3,533	81	1 to 42·6
Norfolk,	836	18	1 to 46·5
Plymouth,	769	32	1 to 24·0
Suffolk,	5,058	171	1 to 29·6
Worcester,	2,472	72	1 to 34·3
The State,	19,739	624	1 to 31·6

The highest ratio occurred in Dukes and Nantucket counties, one to 15·7, and the lowest in Franklin County, one to 145·0. Other counties having high ratios were : Plymouth, one to 24·0; Hampden, one to 24·2; Essex and Barnstable, each, one to 25·7. Other counties having low ratios were : Hampshire, one to 73·6; Norfolk, one to 46·5; and Middlesex, one to 42·6.

In table 59 it appears that the average length of married life of all libellants in 1888 was 11·03 years, as compared with 11·69 in 1887.

Of the suits entered upon the charge of adultery, the average length of married life was 10·07 years; for desertion, it was 11·67 years; for intoxication, 12·0 years; for extreme cruelty, 10·8 years; for cruel and abusive treatment, 9·02 years; for non-support, 11·25 years, and for imprisonment, 11·0 years.

Of the whole number of suits entered in 1888, in 16·1 per cent., the length of married life had been from one to five years; in 34·4 per cent., from five to ten years; in 34·5 per cent., from ten to twenty years; in 10·3 per cent., from twenty to thirty years, and in 2·8 per cent., over thirty years.

Twelve of the libellants had been married less than one year, and six less than six months.

With reference to causes of divorce, the length of the married life of libellants in case of those entered for adultery was from one to five years in 21·3 per cent. ; from five to ten years in 32·4 per cent. ; from ten to twenty years in 36·0 per cent. ; from twenty to thirty years in 5·9 per cent. In three cases it had continued less than one year, and in three more than thirty years.

Of the libellants on account of desertion, 13·3 per cent. had been married from one to five years ; 34·6 per cent., from five to ten years ; 34·6 per cent., from ten to twenty years ; 13·6 per cent., from twenty to thirty years. Three had been married less than one year, two less than six months, and eleven had been married more than thirty years.

Of the libellants on account of intoxication, 13·7 per cent. had been married from one to five years ; 33·7 per cent., from five to ten years ; 37·9 per cent., from ten to twenty years ; and 8·4 per cent., from twenty to thirty years. Two had been married less than one year, and three had been married over thirty years.

A summary of the statistics relative to the length of married life of libellants, for the period of seven years ending with 1888, is presented in table 60. The number of suits entered during this period was 4,920, and the average length of married life of those who entered their suits was 11·38 years.

The average for the different causes was as follows : for adultery, 10·02 years ; for cruel and abusive treatment, 10·09 years ; for desertion, 12·16 years ; for extreme cruelty, 10·54 years ; for imprisonment, 11·91 years ; impotency, 9·4 years ; intoxication, 12·05 years ; non-support, 9·98 years ; nullity of marriage, 4·77 years.

Of the whole number of libellants, 22, or ·45 of one per cent., had been married less than six months ; 23, or ·47 of one per cent., from six months to one year ; 751, or 15·3 per cent., from one to five years ; 1,576, or 32·0 per cent., from five to ten years ; 1,913, or 38·9 per cent., from ten to twenty years ; 481, or 9·8 per cent., from twenty to thirty years ; 144, or 2·9 per cent., over thirty years ; and in ten cases the length of married life was not stated.

DEATHS.

The number of deaths reported for the year 1888 was 42,097, which was 1,334 more than the number returned in 1887, and 4,853 more than the number reported in 1886.

It was also greater by 3,929 than the average mortality of the five years ending with 1887, and was the greatest number reported in any year since the beginning of registration.

Estimating the population in 1888 to have been 2,044,506, the death-rate for the year was 20·59 per thousand of the living population, which was greater than that of any previous year since 1875, and was also sufficiently large to increase the average mortality-rate (19·43) for the thirty-seven years (1851–1887) to 19·48 for the period of thirty-eight years ending with 1888.

The mortality of infants under one year was 8,870, which was greater than that of any previous year of registration; the greatest infant mortality of the previous fifteen years having been 8,514 in 1887, and the least, 5,805 in 1879.

The percentage of deaths of children under one year of age to the total mortality in 1888, was 21·07, as compared with 20·89 in 1887, and 21·07 in 1886.

In table 61 are presented the number of deaths and the death-rates per 1,000 of the living population for each year, and for quinquennial periods from 1851 to 1888, inclusive. The death-rates for all years except census years are estimated.

In table 62 are given the death-rates for the different counties for the five census years (1865–1885), and also the number of deaths in each county for each year since 1880; by this table it appears that the mortality in each county except Essex and Franklin for the year 1888 was greater than that of the previous year.

TABLE 61. — *Deaths and Death-rates, 1851-1888.*

In table 63 are presented the mortality-rates of cities and towns of similar size. By these figures it appears that there was an increase in the mortality of each city except Lowell, New Bedford, Somerville and Salem. There was also an increase in each of the groups of smaller towns except that which comprised the towns having less than 1,000 inhabitants in each.

In table 64 the fourteen counties are divided into groups, for the purpose of showing the relation of density of the population to the mortality-rate. The population, the area of each group

and the density of each are given, together with the mortality-rate as calculated from a definite census, that of 1885. The densely settled counties are collected in one group, and the sparsely settled in another. The former group includes Suffolk, Essex, Middlesex, Bristol, Norfolk and Hampden counties; and the latter comprises Worcester, Plymouth, Hampshire, Berkshire, Barnstable, Nantucket, Franklin and Dukes counties.

TABLE 64. — *Relation of the Death-rate to Density of Population, by Groups of Counties.*

The State, . .	8,315·8	233·5	1,942,141	40,763	42,097	21·0	21·7

* Estimated by census of 1885.

In the former, with an average density of 442 to each square mile, by the census of 1885, the mortality-rate was 22·3 per 1,000 of the population; and in the latter group, having a density of 102, it was 20·0 per 1,000. There was therefore a difference of 2·3 per 1,000 in favor of the rural counties, as compared with a difference of 3·0 per 1,000 in 1887, and 2·0 per 1,000 in 1886.

The death-rates indicated in this table are undoubtedly higher than the actual death-rates, since the population has probably maintained a rate of increase as great as that of the years immediately preceding, and the ratio of mortality in one group, as compared with that in the other, may also differ considerably from the estimate, in consequence of a difference in their rapidity of growth.

In table 65 it appears that the total mortality of 1888 was greater than that of 1887, and the mortality of every month, except July, November and December, was greater than that of the corresponding month of 1887. The greatest difference was in July, in which month there were 759 less deaths than there were in July, 1887; the least difference (91) was in the month of April.

TABLE 65. — *Relation of the Mortality-rate to Seasons of the Year. — 1887-1888.*

The greatest number of deaths occurred in August, and in the third quarter, and the least number in November, and in the fourth quarter. In the previous year the greatest number of deaths occurred in July and the least in June.

In table 66 are presented the percentages of deaths in each quarter of the years for a period of eighteen years.

The order is as follows, beginning with the maximum: For 1888, it was third, first, second, fourth; but for 1887, as well as for the average of the seventeen years, it was third, first, fourth, second; for 1886, it was third, fourth, first, second; and for 1885, it was third, first, second, fourth.

In 1879 only, in the years included in this period, did the greatest mortality occur in the first quarter of the year.

TABLE 66. — *Percentages of Deaths, by Quarters. — 1871–1888.*

1888,	26.6	23.6	27.8	22.0

The difference in the mortality of the population at different seasons of the year is influenced considerably by the mortality of children under five years of age. Table 67 is therefore introduced, in which is presented the deaths of this class by months for the year 1888, with the percentages for each month.

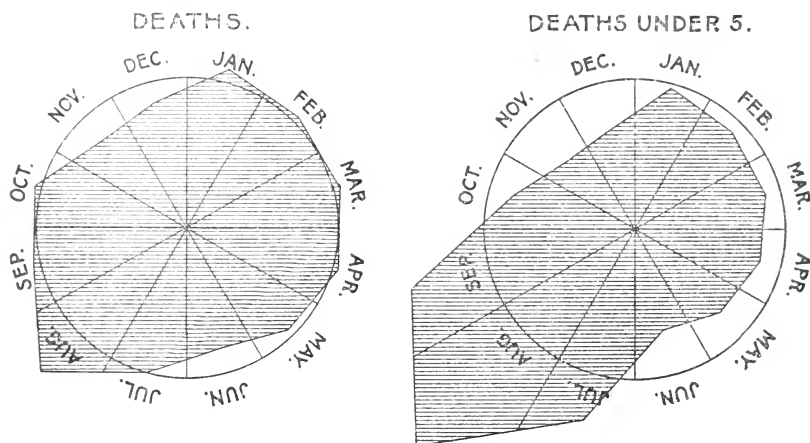

TABLE 67. — *Deaths of Children under five, by Seasons. — 1888.*

	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.

Half-years,	5,775						7,728					
Percentages,	42.77						57.23					
	13,503											
	100.00											

By this table it appears that the least mortality of children under five years was in the month of November, and also in the

last quarter of the year, and the greatest mortality was in the month of August and in the third quarter. The mortality of August was more than thrice that of November, and the mortality of the third quarter of the year was greater than the combined mortality of the second and fourth quarters for this class.

The data in tables 65 and 67 are illustrated by the following diagrams.

Sex.—Table 68 presents the mortality of males and females for a period of thirty-seven years, the ratio of the mortality of males to that of females, and also the mortality-rate of each sex, the latter being given for census years only.

The excess of the mortality of females over males finds but a partial explanation in the excess of the former over the latter; since, while this excess of the female population over the male amounted to 8.19 per cent. by the census of 1885, the excess in the mortality of the female population in the same year was very much less.

In 1888, notwithstanding a considerable excess of females estimated upon the census of 1885, there was an actual excess in the mortality of males over that of females of 371, as compared with an excess of females of 105 in 1887, and 74 in 1886. There had been no excess of mortality of males since 1873, until 1888.

TABLE 68.—*Mortality of Males and Females compared.—1852–1888.*

IV. Females to 1,000 males,	837	801	868	853	1,026	1,054	1,086	1,050	1,005	983

Between the ages of 20 and 30, the deaths of females exceeded those of males by 106, and for all other ages the deaths of females exceeded those of males by 593.

In tables 70 and 71 are presented the ratios of deaths at certain ages, as compared with the total number, for a period of seventeen years. The percentage of deaths under one year was greater than that of 1887, and also greater than the average of the seventeen years.

TABLE 70. — *Deaths at Different Ages. — Percentages. — Seventeen Years.*

	Under 1 Year.	Under 5 Years.	20 to 30.	All Others.
1872,	23·96	38·75	10·76	50·49

1888,	21·07	32·09	9·49	58·42
Average,	20·95	33·75	9·65	56·59

The percentage of deaths under 5 was less than that of 1887, for the same period of life, and also less than the average of the seventeen years.

The percentage of deaths between 20 and 30 was less than that of 1887, and also less than the average. The percentage of all other deaths was greater than that of 1887, and also greater than the average.

IV. Females to 1,000 males,		814	863	1,188	1,073	1,007

Much greater significance is given to these figures if the number of persons dying at each age-period is compared with the number of persons living at the same period of life, as is shown by the following table :—

Deaths at Different Periods, compared with the Numbers of those living at the Same Periods.—1888.

	Under 1 Year.	Under 5 Years.	20 to 30.	All Others.	All Ages.
Deaths, 1888,	8,870	13,508	3,998	24,591	42,097
Persons living at same ages, estimated (1888),	37,780	187,741	410,185	1,451,765	2,044,506
Death-rate per 1,000, .	234.8	71.9	9.7	16.9	20.6

Infant Mortality.—The number of deaths of infants under one year of age (8,870) was greater than that of any previous year since the beginning of registration. The ratio of deaths under one (21.07) to the total deaths was greater than that of the previous year, and was also slightly greater than the average of the past seventeen years.

As compared with the number of births, the ratio was 16.16 per cent., which was greater than that of any year since 1882, and was also .05 of one per cent. less than the average of the past seventeen years.

Table 73 presents the population of the State for the census years 1865–1885, for all specified ages, and also the deaths and death-rates per 1,000 living at the same ages for the same years.

For the purpose of comparison, the deaths for the years 1886, 1887 and 1888, at specified ages, are also given.

The statistics given in table XIII. of this report pertaining to infectious diseases, upon pages 134–137, will undoubtedly explain many of the fluctuations in the death-rates in table 73 in different years.

In table 74 are given the average ages of all who have died in the State, by counties, for thirty years in quinquennial periods, and for each year separately since 1880.

There was a general increase in the average age in all the counties from the earlier to the later periods. As compared with the figures of 1887, there was a slight decrease in the State at large; and in the counties there was an increase, in Bristol, Middlesex, Nantucket and Norfolk, while in the remaining counties there was a decrease.

TABLE 73. — *Population, Deaths and Death-rates per 1,000 Living at Specified Ages, 1865-1885; and Deaths, 1886-1888.*

* 115 years.

† 111 years.

‡ 112 years.

§ 113 years.

|| One 113 years and one 118 years.

Deaths of persons reported as having lived one hundred years or more.—In table 75 are presented the names and other principal data relative to those persons who have died in the year 1888, who were reported as having attained the age of one hundred years or more; and in table 76 are also presented the statistics relative to such decedents for a series of ten years (1879–1888).

Ages.—The total number of those reported as having died between the ages of 100 and 101 during the ten years was 55; between 101 and 102 it was 37; between 102 and 103, 36; between 103 and 104, 16; between 104 and 105, 9; and between 105 and 106, 20. Eight were reported to have lived beyond 110 years, and of the latter, one was reported to have attained the age of 113 at death, and another 118 during the year 1888.

Sex.—Of the whole number reported, 72·5 per cent. were females.

Nativity.—Of the whole number, 55 per cent. were of foreign birth.

Conjugal condition.—Eighty-nine and nine-tenths per cent. of the whole number had been married.

Totals, . . .	31,124	73·93	10,574	25·12	399	·95	42,097	100·00

In tables 77 and 78 are presented the percentages of deaths, by nativity, for 1887, and also for a period of thirty-five years; wherein it appears that the ratio of deaths of the native-born, to the total mortality of those whose parentage was known, was greatest in Dukes, Barnstable, Nantucket, Franklin and Plymouth counties, and least in Suffolk, Bristol, Middlesex and Hampden, in the order named.

As compared with the statistics of previous years, the percentage of mortality of the native-born in 1888, to the total mortality of those whose parentage was known, was greater than that of 1887, and was less by 1.77 per cent. than the average of the five years 1881-85.

1888,	42,097	31,124	74.64	10,574	25.36

* Including those whose nativity was not recorded. In the calculations of percentages, the ratios are not given to the *total* reported deaths, but only to the total of those cases where the nativity was stated.

CAUSES OF DEATH.

The number of deaths of which the causes were not registered in 1888 was 538, out of a total of 42,097. This number was 1·28 per cent. only of the total number as compared with 1·22 per cent. in 1887, 1·21 in 1886 and 1·31 in 1885. It was also less than one-fourth as great as that of the early years of the period of twenty years (1869–1888).

The following table (79) exhibits the percentage of deaths in which there was a failure to return the causes for a series of twenty years. This table shows a marked improvement since 1869, the percentage of failure to return the causes of death having been greatly diminished since that date. The table evinces a greater care on the part of registration officers during the latter years of the period, and also a better discrimination as to the causes of death on the part of the physicians who are responsible for the certificates of death.

* Excluding 1,943 still-born.

The statistics of the causes of death are presented by counties in table 80, divided into five general groups or classes, together with those whose causes were registered as unknown. From this table it appears that Dukes, Berkshire, Barnstable and Franklin counties returned the greatest percentage of deaths from unknown causes; and Suffolk, Bristol and Nantucket counties returned the least percentage of such cases.

Of the 538 deaths, of which the causes were either not returned or were of an ill-defined character, 117 were recorded as deaths from "hemorrhage," 78 from "tumor," 29 from inflammation, and 312 were either returned as from "unknown" causes, or their causes were not stated in the returns.

Of the class of diseases usually called *zymotic*, Hampden, Berkshire and Middlesex returned the highest percentages, and Dukes, Nantucket and Barnstable the lowest; the percentage in the whole State being 19.10.

As compared with the statistics of the previous year, the greatest decrease was found in Dukes County (2.67). The decrease in other counties was as follows: Bristol, 2.31; Franklin, .81; Middlesex, .12; Nantucket, .48; Norfolk, .41; Suffolk, 2.29. In the following counties there was an increase: Barnstable, 1.40; Berkshire, 2.55; Essex, .02; Hampden, 2.57; Hampshire, .80; Plymouth, 2.62; Worcester, 1.74.

In the class of *constitutional* diseases, Nantucket, Suffolk, Norfolk and Essex counties returned the highest percentages, and Berkshire, Hampden, Franklin and Dukes counties the lowest.

In the class of *local* diseases, Nantucket, Barnstable, Plymouth and Dukes counties returned the highest percentages, and Berkshire, Hampden, Bristol and Suffolk the lowest.

In the class of *developmental* diseases, Nantucket, Dukes, Berkshire and Barnstable presented the highest percentages, and Suffolk, Norfolk, Hampden and Bristol the lowest.

In table 81 are presented the percentages of each class of diseases, as compared with the total number of deaths from specified causes for a period of ten years for the State.

The percentage of deaths from *zymotic* diseases was slightly less than that of 1887, and also less than that of the average of the ten years (1879-1888).

The percentage of deaths from *constitutional* diseases was less than that of any year in the period of ten years, and also less by .8 of one per cent. than that of 1887.

TABLE 81. — *Percentage of Causes of Death, by Classes.* — Ten Years.*

YEARS.	CLASSES.				
	Zymotic.	Constitutional.	Local.	Developmental.	Violent Deaths.
1879,	23.3	25.0	37.1	10.1	4.5
1880,	24.5	23.7	38.0	10.1	3.7
1881,	23.0	24.3	38.2	10.6	3.9
1882,	21.8	24.0	38.7	11.2	4.3
1883,	20.6	23.8	40.2	10.9	4.5
1884,	21.1	23.8	39.7	10.9	4.5
1885,	19.0	23.7	42.7	10.7	3.9
1886,	18.5	24.2	42.0	11.0	4.2
1887,	19.7	22.6	42.7	10.7	4.2
1888,	19.1	21.8	43.7	10.2	4.0
Average,	21.0	23.7	40.5	10.6	4.2

* Excluding deaths from unspecified causes, and still-births.

In the class of *local* diseases there has been almost a uniform increase since 1879 from 37.1 per cent. to 43.7 per cent. The percentages for the past five years were: 1884, 39.7; 1885, 42.7; 1886, 42.0; 1887, 42.7; 1888, 43.7.

In the other classes, the *developmental* and *violent*, the variations from year to year have been but slight.

I. *Zymotic Diseases.* — In table 82 are presented the statistics of mortality from the chief zymotic or infectious diseases for a period of ten years (1879–1888). By this table it appears that the number of deaths from these diseases was less by 38 than that of the previous year from the same causes, but greater than that of any previous year since 1881. It was also greater by 153 than the average of the ten years.

The mortality from dysentery has presented but slight variations since 1883, and was less than the average of the ten years. The mortality of the first five years was much greater than that of the last five years of the period.

TABLE 82. — *Mortality from Prominent Zymotic Diseases. — Ten Years.*

YEARS.	DISEASES.

1888, . .	248	943	245	500	1,331	219	504	2,195	8	6,193
Average,	313	892	248	551	1,315	206	536	1,961	18	6,040

The mortality from typhoid fever was greater than that of any year since 1882, and also greater than the average of the ten years from this cause.

The deaths from whooping-cough were greater than those of 1887 and 1885, and less than those of 1886 and 1884, and were slightly less than the average of the period.

The deaths from croup were less than those of any year of the ten-year period except 1882, and were also less by 51 than the average of the period.

The deaths from diphtheria were greater than those of any year since 1881, and were also slightly greater than the average of the period.

Measles caused 219 deaths, which was less than half the number of deaths from the same cause in 1887, and was slightly greater than the average of the period. The fluctuation in the mortality from measles has been very marked, the mortality from this cause having varied from 19 in 1879 to 455 in 1887.

Scarlet-fever was the cause of 504 deaths in 1888, which was 90 less than those of 1887, 173 more than those of 1886, and 32 less than the average of the period.

Cholera infantum caused 2,195 deaths, which was 64 more

than those of 1887, and also greater than those of any year in the period, but less than the mortality from this cause in either 1872, 1873, 1874, or 1875.

Small-pox caused but 8 deaths during the year 1888, which was greater than the mortality from this cause in 1887 or 1886, but less than the average of the period.

II. *Constitutional Diseases.*—The deaths from consumption in 1888 were 5,728, or 13·61 per cent. of the total mortality, and those from cancer were 1,275, or 3·06 per cent. of the total mortality.

The statistics relative to these principal diseases of this class will be found under their special subjects on later pages of this Report.

III. *Local Diseases.*—In table 83 are presented the statistics of the principal local diseases.

TABLE 83. — *Mortality from Principal Local Diseases.—Ten Years.*

YEARS.	DISEASES.

Average,	891	1,092	157	742	2,226	975	101	3,068	320	992

There was an increase in the number of deaths from diseases of the *nervous system* as compared with those of the previous years; but the ratio of increase was much less than that of the deaths from this cause in 1887 as compared with those of 1886. The total number of deaths from apoplexy, paralysis, insanity

and convulsions in 1888 was 3,561, which was 81 more than the number reported in 1887, 465 more than that of 1886, and 517 more than that of 1885 from the same causes.

The number of deaths reported from *apoplexy* was 1,233, which was but 8 more than that of 1887, while it was 260 more than that of 1886, 230 more than that of 1885, and also 342 more than the average of the decennial period (1879-1888).

The number of deaths from *paralysis* was 28 more than that of 1887, 104 more than those of 1886, 145 more than that of 1885, and 185 more than the average number for the decennial period. The ratio of increase in the number of deaths from this cause throughout this period of ten years has been much more uniform than that of apoplexy.

The number of deaths reported as due to *insanity* was 204, which was greater than that of any previous year. It was 59 greater than that of 1887, 53 greater than that of 1886, 16 greater than that of 1885, and 47, or 30 per cent., greater than the average of the decennial period.

The deaths from *convulsions* were 14 less than those of 1887, 48 more than those of 1886, 126 more than those of 1885, and 105 more than the average of the period.

The deaths from the group of *heart* diseases were 3,061, or 224 more than those of 1887, 592 more than those of 1886, 834 more than those of 1885, and 835 more than the average of the decennial period.

The number of deaths from the principal diseases of the *respiratory* organs—pneumonia, bronchitis and pleurisy—was 5,160, which was 496 more than that of 1887, 1,204 more than that of 1886, and 423 more than that of 1885.

From *bronchitis* there were 1,326 deaths, which was 114 more than those of 1887, 306 more than those of 1886, 215 more than those of 1885, and 351 more than the average of the period.

From *pleurisy* there were 118 deaths, which was 14 more than those of 1887, 18 more than those of 1886, and 20 less than those of 1885.

From *pneumonia* there were 3,716 deaths, which was 368 more than those of 1887, 880 more than those of 1886, 248 more than those of 1885, and 648 more than the average of the decennial period. The mortality from this cause was also greater than that of any previous year of registration.

The deaths from *peritonitis* were 415, which was 28 more than those of 1887, 95 more than those of 1886, and 65 more than those of 1885.

In the group of kidney diseases there was a decided increase, the number being 1,324, or 178 more than those of 1887, 163 more than those of 1886, 196 more than those of 1885, and 329 more than the average of the period.

Developmental Causes. — The number of deaths reported as due to the indefinite cause, teething, was 109, which was but one more than that of 1887, 8 less than that of 1886, 20 less than that of 1885, and also less than that of any year except 1887, since the beginning of registration.

TABLE 84. — *Mortality from Chief Developmental Causes. — Ten Years.*

YEARS.	DISEASES.					
	Teething.	Still-born, Infantile, Premature.	Child-birth.	Abortion.	Puerp. Con- vulsions.	Old Age.
1879, . . .	151	1,753	174	2	30	1,597
1880, . . .	184	1,894	183	13	28	1,693
1881, . . .	193	2,078	156	10	49	1,816
1882, . . .	172	2,228	158	8	33	2,024
1883, . . .	127	2,288	150	5	43	1,968
1884, . . .	142	2,352	123	5	36	1,957
1885, . . .	129	2,286	206	13	43	2,007
1886, . . .	117	2,565	153	3	33	1,905
1887, . . .	108	2,620	114	6	27	1,961
1888, . . .	109	2,802	110	7	27	2,024
Average, . .	143	2,286	153	7	35	1,895

The number of deaths of infants reported as due to causes incident to the time of birth was 2,802, which was 182 more than that of 1887, 237 more than that of 1886, 516 more than that of 1885, and also 516 more than the average of the period of ten years.

The rate of increase from this group of causes should be compared with the birth-rate of the population, which has also increased with considerable uniformity from 23.46 per 1,000 of the population in 1879, the first year of the decennial period, to 26.85 in 1888, the last year of the same period, an actual increase of 14,598 births.

The number of deaths reported from old age was 2,024, which was 63 more than that of 1887, 119 more than that of 1886, 17 more than that of 1885, and was also greater than that of any year since the beginning of registration, except 1882, which was also 2,024.

The number of deaths from the causes incident to child-birth was slightly less than that of the previous year, the number from such causes in 1888 being 144, as compared with 147 in 1887, 189 in 1886, and 262 in 1885, and an average of 195 in the decennial period.

If the number of deaths from puerperal fever (83) be added to the sum of the deaths from these causes, the ratio as compared with the total number of labors reported for 1888 is but one in 248·5, as compared with one in 240·8 in 1887, one in 186·1 in 1886, and one in 138·5 in 1885.

Deaths from Violence.—The total mortality from the principal causes due to violence, either homicidal, suicidal or accidental, was 992, which was less than that of 1887 or 1884, but greater than that of any other year of the decade (1879–1888).

TABLE 35. — *Violent Deaths. — Ten Years.*

YEARS.	Burns and Scalds.	Poison.	Railroad Accidents.	Drowning and Lost at Sea.	Freezing.	Heat.	Lightning.	Homicide.	Suicide.	Totals.
1879, . . .	88	38	119	461	3	11	2	17	161	900
1880, . . .	80	48	146	251	—	31	1	15	133	705
1881, . . .	101	48	171	276	2	24	2	20	165	809
1882, . . .	107	44	182	355	11	25	5	21	162	912
1883, . . .	106	39	185	448	4	50	4	15	167	958
1884, . . .	112	39	186	426	3	34	3	18	184	1,005
1885, . . .	110	49	187	295	5	19	4	21	176	866
1886, . . .	107	52	210	372	1	16	7	20	149	934
1887, . . .	100	44	273	375	—	84	1	14	165	1,056
1888, . . .	113	62	265	349	3	17	3	16	164	992

The deaths of persons drowned and lost at sea were 349, which was less than those of either 1886 or 1887, and greater than those of 1885.

Three deaths were reported as having been caused by lightning and 17 by heat, as compared with 84 in 1887 and 16 in 1886.

The further discussion of this class of deaths will be found under the head of Medical Examiners' Returns.

Most Prominent Causes of Death.—In table 86 is presented, in tabular form, the relative position which each of twelve prominent causes of death held, in its incidence upon the population, for each year of the decennial period (1879–1888).

Consumption and pneumonia proved to be the most destructive causes of death throughout the period of ten years. Heart diseases advanced from the fourth place in 1879 to the third place in the last six years.

Cholera infantum held the fourth place in 1888, 1887 and 1886, and varied from the third to the sixth place in the preceding years.

Old age held the fifth rank in nearly every year of the period.

Cephalitis advanced from the tenth place to the sixth, which it occupied in 1885, 1887 and 1888.

Diphtheria changed its position from the third place, gradually receding to the twelfth in 1887, and again advanced to the seventh in 1888.

Bronchitis has gradually advanced from the twelfth place in 1879 to the eighth in 1888. Kidney diseases held the thirteenth place in 1880, advanced to the eighth in 1885 and 1886, the eleventh in 1887, and the ninth in 1888.

Paralysis maintained a nearly uniform rank of the seventh place until 1888, when it receded to the tenth place.

Cancer has gradually fallen off from the eighth to the eleventh place.

Apoplexy has maintained nearly a uniform rank.

Typhoid fever, which held the fourth rank in 1872 and the sixth in 1873, has disappeared from the list. If the table were extended, this disease would hold the fourteenth position, and tabes mesenterica thirteenth.

This group of twelve most destructive causes of death constituted 61·49 per cent. of the total deaths of the year 1888, as compared with 60·18 per cent. in 1887, 60·25 per cent. in 1886, 59·84 per cent. in 1885, and 58·85 per cent. in 1884.

The other prominent causes of death, in their relative order in 1888, were as follows : —

	Deaths.		Deaths.
13 <i>Tuberculosis mesenterica</i> , . . .	1,109	17 <i>Enteritis</i> ,	670
14 <i>Typhoid fever</i> ,	943	18 <i>Diarrhoea</i> ,	587
15 <i>Atrophy and debility</i> ,	932	19 <i>Scarlet-fever</i> ,	504
16 <i>Convulsions</i> ,	847	20 <i>Croup</i> ,	500

In table 87 are presented the ratios of the most destructive causes of death, as compared with the total mortality in each county, in 1888.

In all of the counties except Nantucket, Franklin and Dukes, consumption was the most prominent cause, old age taking the first place in Dukes County, pneumonia in Franklin, and paralysis in Nantucket.

Pneumonia was the second destructive cause in nine counties. It also held the third place in one county, and the fourth and fifth in two others.

Old age was the second in the order of fatality in one county, the third in two counties, the fourth in five counties, and the fifth in three counties.

Heart diseases held the second place in two counties, the third place in eight counties, and the fourth in four counties.

Cholera infantum held the third place in two counties, the fourth in two counties, and was most prominent in the fifth place, where it was the most destructive cause in four counties.

In table 88 are presented the numbers of deaths from the most destructive causes, at the different periods of life, during 1888.

By this table it appears that consumption was the most destructive cause of death for all ages between 10 and 60 years, as it was, also, in the six previous years. Cholera infantum was the most destructive cause among children under five, and diphtheria, for the next five years.

Heart disease was the chief cause of death from 60 to 80 years.

Pneumonia held the second place as a prominent cause among children under five years, and for the period between

30 and 50 years. Heart diseases held the second position for ages between 50 and 60 years, and for all above 80.

Typhoid fever held the second position for ages between 10 and 30. Scarlet-fever held the second place for children between five and ten years.

Pneumonia was the third prominent cause for ages between 5 and 10, 15 and 30, 50 to 60, and 70 to 80.

While this table has a certain value for the purpose of comparing the destructiveness of certain diseases at definite periods of life, it has no significance for the purpose of comparing those periods with each other; since, as will be seen by a later table, no account is taken of the number of persons living at those periods.

Contribution of Each Age-period to 100 Deaths (1863-1888).

[illegible]

The foregoing tables present the statistics of mortality from certain specified causes for the year 1888, and also for a period of twenty-six years (1863-1888).

These tables present the numbers of deaths from each of ten diseases, by sex, by months and by ages, together with the percentages for each sex, each month and each age-period. To these tables another was added in 1887, in which the mortality at each age-period is compared with the number living at such period. The value of such a table in estimating the actual incidence of any one of the diseases presented in the table is more fully illustrated in the forty-sixth Registration Report (1887), pages 363-365.

The diseases grouped in these tables are small-pox, measles, scarlet-fever, diphtheria, croup, typhoid fever, dysentery, cholera infantum, consumption and pneumonia.

Small-pox.—There were eight deaths from this disease during the year, one of which occurred in Hampshire County, four in Hampden, two in Suffolk, and one in Worcester, as compared with three deaths from this cause in the State in 1887, none in 1886, and 19 in 1885.

Compared with the living population, the death-rate from this disease for the twenty years, 1849–1868, was 1·22 per 10,000, and for the twenty years, 1869–1888, it was ·71 per 10,000,—a very decided reduction, notwithstanding the serious epidemic of 1872, in which year occurred nearly one-half of the deaths reported from this disease for the second period in question. The percentage of deaths from this cause to deaths from all causes for the same periods was ·65 of one per cent. for the former, and ·36 of one per cent. for the latter period.

The following tables illustrate in a striking degree the decided changes which have taken place in the incidence of this disease upon persons of different ages since the introduction of vaccination.

Ratio to Total Mortality from Small-pox per 1,000.

AGES.	Geneva.	Kilmarnock.	MASSACHUSETTS, 1863-1888.	
	1580-1760.	1728-1764.	Ages.	Ratio.

Not stated,	—	14·5	Above 30,	220·8
	1,000·00	1,000·0		1,000·0

These figures do not give the ratio of mortality to the population at the different age-periods. The enormous differences in the mortality at different ages thus presented are, however, such as to outweigh the effect of slight differences which prevail in the earlier age-periods of life.

The following are the average annual ratios of the deaths from this disease to the population at the different ages of life, the deaths at each age-period being compared with the persons living at the same period.

These ratios present results similar to those of other countries in which vaccination is partially enforced. The large ratio of deaths of children under 5 years corresponds to the experience of partially vaccinated populations, and the increasing ratio at the ages 10-30 undoubtedly indicates a neglect of re-vaccination at a time when the renewed susceptibility to small-pox has not been met by re-vaccination of persons living at those ages.

Measles. — The number of deaths from measles registered in 1888 was 219, which was less than half the number of 1887 (455).

It was 89 more than that of 1886, and 94 less than that of 1885.

The mortality-rate from measles for 1888 as compared with the total mortality was .52 of one per cent. ; it was 1.12 in 1887, .35 in 1886, .82 in 1885, and the annual average was .67 for the period of thirty years (1859-1888).

1873, .	180	.53	1.1	1888, .	219	.52	1.1
Average of thirty years,				209	.67	1.33	

Compared with the estimated living population of 1888 it was 1·1 per 10,000; that of 1887 being 2·3; that of 1886, ·6; that of 1885, 1·6; and the average of the thirty years, 1·33 per 10,000.

Of the 219 deaths from this cause in 1888, 170, or 77 per cent., occurred in Essex, Hampden, Suffolk and Worcester counties. No deaths were registered from this cause in 1888 in Bristol, Dukes, Nantucket and Plymouth counties.

The mortality-rate from this disease, compared with the population at each age-period, was 10·16 per 10,000, annually, for children under 5 years of age, for the twenty-six years 1863–1888, the ratio diminishing rapidly until the age-period 50–60, and then increasing considerably to the older ages.

Scarlet-fever. — The number of deaths registered from this disease in 1888 was 504, which was 90 less than that of 1887, 173 greater than that of 1886, 83 less than that of 1885, and 395 less than the average of the thirty years 1859–1888.

TABLE 95. — *Mortality from Scarlet-fever, by Counties.
1887 and 1888.*

COUNTIES.	DEATHS.		COUNTIES.	DEATHS.	
	1887.	1888.		1887.	1888.

Franklin,	11	3	Worcester,	52	57
Hampden,	12	16			
Hampshire, . . .	16	7	The State,	594	504

The ratio of mortality from scarlet-fever, compared with the total mortality, was 1·19 per cent.; which was less than that of 1887, 1885, 1884 and 1883, but greater than that of 1886. It was considerably less than half the average rate of mortality from this disease for the past thirty years. Compared with the estimated population, the mortality-rate of scarlet-fever was 2·5 per 10,000.

The mortality from this cause was more uniformly distributed

with reference to the population than that of 1887. There were no deaths from scarlet-fever during the year in Dukes and Nantucket counties.

Average, thirty years,				899	2.89	5.6	

The mortality ratio from this disease for the early period of life was as follows: For children under 5 years of age, 18.3 per 10,000 living at that age in 1888, and 34.9 per 10,000 for the period of twenty-six years 1863-1888. For the age-period 5 to 10 years, it was 6.60 per 10,000 for the year 1888, and 13.42 for the twenty-six-year period 1863-1888. These ratios are less than those of the year 1887, and also of the twenty-five-year period 1863-1887.

The greatest mortality from scarlet-fever in 1888 was in the month of January and the least in August, the deaths in the different months being as follows, successively: January, 124; February, 78; March, 85; April, 53; May, 43; June, 32; July, 18; August, 11; September, 15; October, 18; November, 14; December, 13.

Diphtheria and Croup.—The number of deaths from these combined causes in 1888 was 1,831, which was 203 greater than that of 1887, 273 greater than that of 1886, and 308 greater than that of 1885. It was also less than that of 1875, 1876, 1877, 1878, 1879, 1880 and 1881.

Franklin, . .	31	17	Worcester, . .	220	168
Hampden, . .	134	163			
Hampshire, . .	24	30	The State, . .	1,628	1,831

Compared with the mortality from these combined causes in 1887, there was an increase in Hampden, Hampshire, Middlesex, Norfolk, Plymouth and Suffolk counties, and a decrease in Berkshire, Bristol, Essex, Franklin, Nantucket and Worcester counties.

The death-rate from these combined causes, compared with the total mortality, was greater than that of any year since 1884.

From croup the mortality-rate, compared with the mortality from all causes, was less than that of any year for the past thirty years, while that from diphtheria was greater than that of any year since 1882.

The mortality-rate for diphtheria at the different ages of life is indicated by the following annual ratios per 10,000 of the population living at such ages, for the period of twenty-six years, 1863–1888; 36.03, 19.26, 5.27, 1.67, .79, .58, .36, .34, .54, .50, .39. These are slightly greater for the earlier ages of life than those of the period 1863–1887 for the same ages.

The mortality from these combined causes, by months, for 1888, was as follows:—

January, 211; February, 159; March, 156; April, 154; May, 173; June, 138; July, 108; August, 113; September, 96; October, 167; November, 180; December, 176.

Typhoid Fever. — The number of deaths from this disease in 1888 was 943, which was 21 more than that of 1887, 143 more than that of 1886, and also more than that of any year since 1875, except 1881 and 1882.

The ratio of mortality from typhoid fever to the total mortality was 2.24, which was less than that of 1887, but greater than those of 1885 and 1886.

Compared with the estimated living population, the ratio

was 4.6 per 10,000, which was greater than that of any year since 1882. In all of the earlier years, from 1860 to 1877, the ratios were higher than that of 1888.

1874, . . .	1,147	3.56	7.1				

The relative mortality from typhoid fever at different ages of life shows a comparatively uniform incidence for the youngest ages up to 60 years, with a considerable increase between the ages of 15 and 30, and a more decided increase from 60 to the close of life, for the 26 years 1863–1888. For the two years 1887 and 1888, there is an increase with considerable uniformity from the earliest period up to the age-period 15–30 years, while for the remainder of life the ratio presents a similar average rate to that of the period 10–15 years, the ratios for each period being generally less than those of the group of years 1863–1888.

The State,	1.91	2.49	2.91	2.91	2.28	2.35	2.02	2.15	2.26	2.21	2.31

There were 536 deaths among males, and 407 among females, which would indicate a ratio of 5·7 per 10,000 for the males, and 4·0 per 10,000 for the females, as estimated from the census of 1885.

The deaths by months were as follows : —

January,	41	July,	43
February,	37	August,	95
March,	52	September,	161
April,	55	October,	180
May,	54	November,	101
June,	50	December,	74

Of the total number of deaths from typhoid fever, 625, or 69·4 per cent., occurred in the last half of the year, and 56·9 per cent. in the months of August, September, October and November.

In tables 100 and 101 are presented the mortality from this disease by counties for a period of ten years (1879–1888), together with the percentages from the same cause for the same period; by which it appears that the greatest increase in the mortality from this cause, as compared with that of 1887, was in the counties of Hampden, Hampshire, Norfolk and Plymouth, while in nearly all of the remaining counties, including the more populous counties, there was a decrease.

TABLE 102. — *Death-rates per 10,000 from Typhoid Fever in Census Years, 1865–1885, by Counties.*

* Dukes,				2·3	9·7	—
* Nantucket,				5·4	3·2	—

In table 102 are presented the death-rates from typhoid fever per 10,000 of the population, for the census years 1865–1885, by which it appears that in all the counties there has been a steady diminution in the mortality from this disease. The uniformity of such decrease is especially noticeable in the most populous counties.

Diarrhœal Diseases. — The number of deaths from this class of diseases was 66 more than that of 1887, and 372 more than the average of the ten years (1879–1888). The sum of this group of diseases, 3,779, was 8·9 per cent. of the total mortality from all causes, as compared with 9·1 in 1887, 9·0 in 1886, 8·5 in 1885, and 9·5 in 1884.

TABLE 103. — *Diarrhœal Diseases.* — 1879–1888.

YEARS.	Diarrhœa.	Dysentery.	Cholera Infantum.	Cholera.	Enteritis.	Diarrhœal Diseases.
1879, . . .	370	372	1,349	77	392	2,560
1880, . . .	480	395	2,118	116	492	3,601

1888, . . .	587	248	2,195	79	670	3,779

Dysentery. — The number of deaths from dysentery in 1888 was 248, which was 18 less than that of 1887, and 5 more than that of 1886. It was 64 less than the average of the ten years (1879–1888).

In table 104 is presented the mortality from dysentery by counties, for the years 1887 and 1888.

TABLE 104. — *Deaths from Dysentery, by Counties. — 1887-1888.*

COUNTIES.	DEATHS FROM DYSENTERY.		COUNTIES.	DEATHS FROM DYSENTERY.

Hampshire, . . .	15	11	The State, . . .	266	248

The introduction of the table of ratios at different age-periods, herewith presented, gives the relative incidence of this disease at the different ages correctly.

Annual Death-rates per 10,000 of the Population Living at each Age-period.

Ages.	1863-1888.	1887.	1888.
Under 5, . . .	16·73	5·15	5·33
5-10, . . .	2·21	·55	·60
10-15, . . .	·67	·17	·16
15-20, . . .	·54	·05	·05
20-25, . . .	·61	·23	·13
25-30, . . .	·84	·24	·17
30-35, . . .	1·21	·72	·45
35-40, . . .	2·18	1·47	·70
40-45, . . .	4·86	3·15	3·25
45-50, . . .	12·63	8·13	7·52
50-55, . . .	28·82	21·27	23·85

By this table it appears that the greatest relative mortality, both for the whole period of twenty-six years and for the two years 1887 and 1888, was at the extremes of infancy and old age. There was also in each instance a decrease in the relative mortality, with considerable uniformity, from the youngest age-period to the period 15-20 years, and then a progressive increase up to old age. The contrast between the extremes of least and greatest incidence was not so great in the two years 1887 and 1888 as it was in the twenty-six-year period (1863-1888).

Cholera Infantum. — The number of deaths from this disease in 1888 was 2,195, which was 64 more than that of 1887, and greater than the average of the ten years (1879-1888). The death-rate per 10,000 of the entire living population was 10·7 as compared with 10·6 for 1887, 9·77 for 1886, 9·52 for 1885, and 10·87 for 1884. It was also greater than the average rate for the decennial period (1879-1888), which was 10·36.

Comparing the two decades, 1869–1878 with 1879–1888, the average annual number of deaths in the former was 2,138, and the rate per 10,000 of the living population, 13·61; and in the latter period the average annual number of deaths was 1,962, and the mortality-rate 10·36.

As compared with the population living under five years of age (Census of 1885), the ratio of mortality from cholera infantum in 1888 was 123·1 per 10,000, while that of the whole period, 1863–1888, was slightly less (112·5 per 10,000).

Of the whole number of deaths from this cause in 1888, 544 occurred in July, 947 in August, and 477 in September; or 89·7 of the whole number, as compared with 89·2 per cent. for the same period in 1887.

There were 1,174 deaths of males from this cause, and 1,021 of females.

TABLE 105.—*Mortality from Cholera Infantum, 1869–78, 1879–88.*

Consumption. — The number of deaths registered in 1887 from this, the most prominent cause of death in the list of diseases, was 5,728, of which number 2,698 were of males and 3,030 of females.

The actual number of deaths from this cause was 143 less than that of 1887, 169 less than that of 1886, and 224 less than that of 1885.

The ratio of deaths to the total mortality was 13·61, which was ·79 per cent. less than that of 1887, and was also the least of any year yet recorded.

* Estimated from average of 5 Census years, 1865-1885.

† Estimated from Census of 1885.

The numbers of deaths from this cause in Barnstable, Berkshire, Essex, Franklin, Hampden, Middlesex and Plymouth counties were less than those of 1887, while those in the other counties were greater.

TABLE 108. — *Mortality from Pulmonary Consumption, by Counties. — 1887 and 1888.*

COUNTIES.	DEATHS.		COUNTIES.	DEATHS.	
	1887.	1888.		1887.	1888.
Barnstable,	88	70	Middlesex,	1,108	982
Berkshire,	157	153	Nantucket,	9	12
Bristol,	415	446	Norfolk,	258	275
Dukes,	9	15	Plymouth,	247	204
Essex,	784	749	Suffolk,	1,637	1,651
Franklin,	87	77	Worcester,	647	660
Hampden,	308	290			
Hampshire,	117	144	The State,	5,871	5,728

In table 106 is given the ratio of the deaths from consumption to the total mortality for a period of ten years, for the State, and for each county; by which it appears that in Bristol, Dukes, Hampshire, Nantucket and Norfolk counties the percentage of mortality from consumption was greater than that of 1887, while in all of the other counties it was less. In two counties only, Hampshire and Suffolk, did the percentage exceed 15 per cent. of the total mortality. The lowest ratios were recorded in Berkshire, Barnstable, Franklin and Hampden counties. The greatest decrease, as compared with the ratios of 1887, was found in Plymouth, Barnstable and Hampden counties.

In table 107 is presented the mortality at different periods of life from this disease, together with the total mortality from all causes for the same periods, for the purpose of comparison. In parallel columns are also given the ratios of mortality from the same cause to the population living at each age-period for the period of twenty-six years, 1863-1888, and also for the single year, 1888. By this table it appears that consumption was most fatal at the age 70 to 80 for the period 1863-88, the age 20 to 30 coming next in order; while for the year 1888 it fell most severely upon the age-period 20-30, the following period, 30-40, coming next in the order of fatality. The mortality at

each period of life was less in 1888 than it was for the average of the whole period at the same ages, except the age-period 10 to 15 years, the greatest differences appearing at the older age-periods from 50 years to old age.

In the same table is also presented the mortality from the same disease for the two sexes for each age-period in 1888, together with the ratio of deaths at each age-period for each sex, to the population of each sex living at such period. From this it appears that the mortality was greater among females at all ages up to the period 20-30 years, and for the older age-periods the mortality was greater among males.

Average, . .	5,299	33·7	Average, . .	5,764	30·5

Table 109 presents the mortality from consumption by months and quarters of the year for 1888. The greatest number of deaths from this disease occurred in the months of April and

May, and the least in September and June. In a monthly average of 477, the variations for the maximum and minimum were 73 and 72.

Table 110 is introduced to show the comparative mortality from consumption to the living population in a period of twenty years, divided into two decades, by which it appears that the death-rate from consumption in 1888 was less than that of any previous year, and the average rate of the ten years (1879-1888) was 3·2 per 10,000 less than that of the previous ten years.

Foreign,	36·14	36·01	36·17	65·54	64·77
Unknown,	1·04	·49	·75	3·56	3·38

In table 111 is presented the nativity of persons who died of consumption in 1888, the numbers for each sex being given,

and the nativity of known cases. Of the whole number, 63·18 per cent. were of native birth, 36·17 per cent. foreign, and ·75 of one per cent. unknown.

The percentages for each sex were nearly the same as compared with the total number of each sex.

In the same table is presented the parent-nativity of those who died of consumption, so far as it was ascertained. The nativity of the fathers was as follows: native, 30·90 per cent.; foreign, 65·54; unknown, 3·56. That of the mothers was nearly identical: native, 31·85 per cent.; foreign, 64·77; and unknown, 3·38.

Pneumonia.—The number of deaths from pneumonia in 1888 was 3,716, which indicates a ratio of 18·2 per 10,000 of the estimated living population, as compared with 16·6 in 1887, 14·3 in 1886, 17·8 in 1885, and 13·8 in 1884.

As compared with the total mortality, the deaths from pneumonia in 1888 were 8·8 per cent.

TABLE 112.—*Deaths from Pneumonia, by Counties.—1887 and 1888.*

COUNTIES.	DEATHS.		COUNTIES.	DEATHS.	
	1887.	1888.		1887.	1888.
Barnstable, . . .	38	40	Middlesex, . . .	651	678

Hampden, . . .	212	216			
Hampshire, . . .	70	85	The State, . . .	3,348	3,716

In every county except Nantucket and Plymouth the deaths from this cause exceeded those of 1887. The counties having the highest ratios to the total mortality were: Franklin, 12·58; Dukes, 9·75; and Suffolk, 9·46. Those having the lowest were: Nantucket, 2·11; Barnstable, 6·49; Plymouth, 7·34; and Bristol, 7·56. With the exception of the smallest counties these figures correspond quite closely to the averages of the same counties for the previous years, and show that the mortality from pneumonia is greater in the inland counties of the State than upon the sea-coast.

Mortality from Pneumonia at Different Ages.—The comparative mortality from this disease at the different age-periods given in tables 90 and 92 for the twenty-six-year period 1863–1888, and also for 1888, shows a high rate for infancy, rapidly decreasing to the age 10–15, and then increasing with less rapidity to old age.

The comparative mortality at the different age-periods maintained a very uniform variation for the twenty-six-year period and for the single year 1888, the ratios in the latter case being higher for each period of life than those of the series of years (1863–1888). In both cases the mortality of old age from this disease is shown to be excessive, a point which is not made clear in the tables of earlier years.

Percentages, .	44.14			26.45			9.09			20.32		

Table 114 presents the mortality from pneumonia by months and quarters of the year for 1888. The greatest number of deaths occurred in March and in the first quarter of the year, and the least in August and the third quarter. The difference between the mortality of the first six months and the last six months of the year was much greater in 1888 than it was in 1886 or 1887.

The State,	302	230	217	265	137	410	184	271	232	245

Whooping-cough.—The deaths from this disease in 1888 were 245, which was 13 more than those of 1887, and 26 less than those of 1886. They were 4 less than the average of the decennial period (1879–1888).

Nearly one-half the deaths from this cause occurred in Suffolk County. There were no deaths from whooping-cough in Dukes and Nantucket counties, and there have been but two deaths from this cause in those counties for the past ten years.

Brain Diseases.—The number of deaths from the group of diseases which includes apoplexy, paralysis, softening of the brain, insanity, cephalitis and other unspecified diseases of the brain in 1888 was 4,522, which was 265 greater than that of 1887, 678 greater than that of 1886, and also greater than that of any previous year.

Totals,	12.06	14.39	14.35	16.42	17.00	20.01	4,522

Of the number who died of apoplexy, 602 were males and 631 were females; 612 males and 665 females died of paralysis; 83 males and 121 females died of insanity; 734 males and 663 females died of cephalitis; 69 males and 48 females died of softening of the brain; and 273 males and 195 females died of unspecified brain diseases.

Of the whole number, 2,373 were males and 2,323 were females; a difference of 50, as compared with 70 in 1887, and 48 in 1886.

From apoplexy and paralysis taken together there were 106 deaths among persons under 30 years of age, 112 between the ages of 30 and 40, 194 between the ages of 40 and 50, 358 between 50 and 60, 576 between 60 and 70, 720 between 70 and 80, and 435 among persons over 80 years of age.

Death-rate from Apoplexy and Paralysis per 10,000 of the Population Living at each Age-period, 1888.

Age-periods.	Ratio.
Under 30, . .	.96
30-40, . .	3.89
40-50, . .	8.70
50-60, . .	22.83
60-70, . .	56.08
70-80, . .	146.25
80 and over, .	280.28

As compared with the population living at each age-period, the mortality from these two diseases is shown by the accompanying table, which presents the death liability of the older age-periods, derived from the statistics of 1888, as estimated from the Census

of 1885. These ratios agree quite closely with those of 1887 for the same age-periods.

The deaths from apoplexy, paralysis, insanity, and from cephalitis and unspecified brain diseases, were considerably in

excess of those of previous years; while those from softening of the brain were less than those of any year since 1882.

In table 117 are presented the mortality-rates from each of the above-named diseases for the census years 1860-1885, and also the deaths from the same diseases in 1888.

In table 118 are presented the statistics of those who were reported as having died insane in 1888, with reference to their nativity. Of the whole number, 67 per cent. were of native birth; 30·54 per cent. foreign, and 2·46 per cent. unknown. The percentage of males of native birth was greater by 6·27 than that of females of native birth.

The parent-nativity is also presented in the same table, by which it appears that 43·35 per cent. of the fathers of such decedents were of native birth, 39·90 foreign, and 16·75 unknown; 44·83 per cent. of the mothers were of native birth, 37·93 foreign, and 17·24 unknown.

Cancer. — There were 1,275 deaths from cancer in 1888, as compared with 1,174 in 1887, 1,104 in 1886, 1,087 in 1885, and 1,060 in 1884.

TABLE 119. — *Deaths from Cancer, and Percentages of Total Mortality, by Counties. — 1887 and 1888.*

The State, . .	1,174	2.88	1,275	3.03

These included all of the deaths registered as cancer, without definite statement as to the organ affected, as well as those in which the particulars as to location were specified, including cancer of the stomach, bowels, liver, uterus and other organs.

Of the cases registered in 1888, 817 were among females, or 67.8 per cent. of the whole number. The ratio of mortality from this cause among females, as compared with the mortality for both sexes, was as follows: —

1883,	67.6 per cent.	1886,	69.7 per cent.
1884,	66.6 “	1887,	69.6 “
1885,	68.8 “	1888,	67.8 “

Ninety per cent. of the deaths occurred between the ages of 30 and 80 years, and 16 deaths only occurred among persons under 20 years of age.

Comparing the mortality from this cause by counties, it appears that there was an increase in Barnstable, Berkshire,

Bristol, Franklin, Hampden, Hampshire, Middlesex, Nantucket, Norfolk, Plymouth and Worcester counties, and in the remaining counties there was a decrease.

Average, .	600	3·8	Average, .	1,045	5·5

In table 120 are presented the statistics relative to the general mortality from cancer for a period of twenty years, in two ten-year periods, together with the mortality per 10,000 of the living population. By this table it appears that there has been an increase, with considerable uniformity, from 3·4 per 10,000 of the population in 1869 to 6·2 per 10,000 in 1888.

If the period were extended to twenty-two years (1867 to 1888), the ratio appears to have been more than doubled (2·9 to 6·2).

In comparing the two decennial periods, it appears that the rate has increased from an average of 3·8 in the former to 5·5 in the latter.

In table 121 is presented the nativity of persons who died of cancer in 1888, the numbers for each sex being given, and the nativity of all cases in which such nativity was known. Of the whole number, 64·16 per cent. were of native birth, 34·90 per cent. foreign, and ·94 of one per cent. unknown. The percentages for each sex differed but little from those of the total number of both sexes.

In the same table are given the parent-nativity of those who died of cancer in 1888, so far as it was known. The nativity

of fathers was as follows: Native, 54·04 per cent.; foreign, 39·61; unknown, 6·35. That of the mothers was very nearly the same, viz.: Native, 54·20; foreign, 38·98; unknown, 6·82.

In table 122 are presented the deaths in each year since 1850 ascribed to kidney diseases, and also in another column the deaths from dropsy. The apparent rapid increase of the former and the decrease of the latter have undoubtedly produced an interchange of mortality-rates, the interpretation of which must be sought for in a better understanding of pathology and of medical diagnosis.

The whole number of deaths reported as having been due to kidney diseases in 1888 was 1,318, which was 31.3 per 1,000 of the total mortality, as compared with 27.4 in 1887, 30.5 in 1886, 28.6 in 1885, and 27.0 in 1884.

As compared with the living population, the mortality from this group of diseases was 6.45 per 10,000; while for 1887 it was 5.57; for 1886, 5.74; for 1885, 5.60; and for 1884, 5.23, per 10,000.

There was also a decline in the deaths from dropsy, the whole number registered from this cause in 1888 being 204, or 4.8 per 1,000 of the total mortality, as compared with 212 or 5.2 in 1887, 219 or 5.9 in 1886, 244 or 6.4 in 1885, 234 or 6.3 in 1884, and 296 or 7.8 in 1883.

From the sum of these causes (kidney diseases and dropsy)

the whole number was 1,522 in 1888, or 36·2 per 1,000 of the total mortality, as compared with 32·7 in 1887, 36·4 in 1886, 35·0 in 1885, 33·3 in 1884, and 33·2 in 1882.

In tables 123 and 124 are presented the numbers of deaths from kidney diseases in each county for a period of ten years, and the percentages of the same to the total mortality. There was an increase in these ratios, over those of 1887, in each of the counties except Barnstable, Hampden and Hampshire.

The slight difference in percentages for the whole State, as compared with those in table 122, is due to the fact that certain diseases, not properly classed with kidney diseases, are classed with kidney diseases in one table, which do not appear in the other. The resulting error is but a slight one.

Sex and Age. — Of the whole number of deaths from kidney diseases in 1888, 782, or 59·5 per cent., were males, and 533, or 40·5 per cent., were females, as compared with 58·4 per cent. and 41·6 per cent. in 1887, and 56·2 per cent. and 43·8 per cent. in 1886.

In table 125 are presented the statistics relative to this class of diseases for the year 1888, by ages, and also for the decennial period (1879–1888).

By this table, in which the mortality from kidney diseases at each period is compared with the population living at that period, it appears that the fatality diminishes slightly from the period of infancy to the age-period 10–15 years, and then increases to old age. At all ages the death liability was greater for the year 1888 than it was for the ten-year period (1879–1888).

In the report of 1887 a more complete table was presented, in which the death-rate from kidney diseases per 10,000 living at each age-period was given separately for each sex, by which it appeared that the difference in the mortality at different periods of life was greater among males than among females. At most age-periods the mortality of females from this cause was found to be less than that of males at the same periods, a slight exception occurring at the child-bearing age, 30–40, among females, at which age the death liability of the two sexes was as follows : —

For males, ten years (1878–1887), . . .	3·99 per 10,000
For females, ten years (1878–1887), . . .	4·05 per 10,000

The greatest differences were at the age 70-80 years, at which period the ratios were as follows : —

For males, ten years (1878-1887),	43.28 per 10,000
For females, ten years (1878-1887),	17.15 per 10,000

Alcoholism. — The number of deaths registered in 1888 as having been due to this cause, including delirium tremens, was 126, as compared with 111 in 1887, 108 in 1886, 122 in 1885 and 125 in 1884. It was also 13 more than the average of the ten years (1879-1888).

The ratio as compared with the total mortality was 2.9 per 1,000, which was .2 of one per 1,000 more than that of 1887.

The rate per 100,000 of the living population was 6.2, which was slightly greater than that of 1887 (5.5).

Comparing the two decades, the ratio of the latter period (1879-1888) was 3.03 per 1,000 of the total mortality, and 5.97 per 100,000 of the living population, while the corresponding ratios of the former decade (1869-1878) were 2.81 and 5.61.

Of these 126 deaths from alcoholism, 84, or 66.7 per cent., were returned from the populous counties of Suffolk, Middlesex and Essex, having but 53.6 per cent. of the population.

Such returns cannot in any sense be regarded as an index of

the prevalence of intemperance, since there can be no doubt that the desire to spare the feelings of surviving relatives limits the statement as to this cause of death to those cases where no disguise is possible.

The undue prominence of the cases reported in the more populous counties may be regarded as partly due to the public institutions existing in those counties.

In table 127 are presented the statistics relative to the nativity and parent-nativity of the greater portion of those who were registered as having died of intemperance in 1888. The numbers of each sex are presented and the nativity of those cases in which their nativity was known.

Out of the 109 cases presented in the table, 86, or 78·9 per cent., were males. Of the whole number, 49·5 per cent. were of native, and 46·8 per cent. were of foreign birth.

Of the males, 55·8 per cent. were of native birth and 39·5 per cent. foreign. Of the females, 26·1 per cent. were of native birth and 73·9 foreign.

This table also presents the parent-nativity of the decedents from alcoholism. The nativity of the fathers was as follows: 23·8 per cent. native and 66·9 foreign; of the mothers, it was 25·7 native and 6·51 foreign.

Old Age. — This title has usually been entered in the nosological table of causes of death under the general class of developmental diseases. It is needless, however, to state that old age is neither a disease nor a cause of death, but simply a condition or period of life. The record of “death from old age” upon a certificate usually implies that the cause was either unknown or not specified.

While 2,024 were recorded in 1888 as having died of “old age,” the greater portion of whom were over 70 years of age, there were also 3,442 other persons who died of apoplexy, paralysis, heart disease, pneumonia, cancer, kidney diseases and violence, after reaching the age of 70 years, none of whom were included in the former number.

A consideration of the deaths recorded under the group entitled “old age” has greater significance when compared with the population than with the total mortality. (See table on page 320.)

TABLE 128. — *Deaths recorded as Deaths from Old Age, by Counties.*
—1888.

COUNTIES.	Deaths.	Death - rates per 10,000 Living.	COUNTIES.	Deaths.	Death - rates per 10,000 Living.
Barnstable, .	51	17·1	Middlesex, .	384	10·7

Hampden, . .	92	7·9			
Hampshire, .	56	11·6	The State, .	2,024	10·4

Sex. — Of the decedents registered under this title in 1888, 1,222, or 60·4 per cent., were females, and 39·6 per cent. were males.

Season of the Year. — The deaths of this group occurred as follows: January, 204; February, 219; March, 211; April, 172; May, 180; June, 129; July, 122; August, 152; September, 157; October, 154; November, 148; December, 176.

The months having the greatest number of deaths of this class were January, February and March, and those having the least were June, July and November. Eleven hundred and sixty-two deaths, or 57·4 per cent., occurred in the six months of January, February, March, April, May and December.

In table 128 are presented the deaths of this class by counties, by which it appears that the highest ratios of mortality occurred in Dukes, Nantucket, Barnstable, Plymouth and Berkshire counties, and the lowest in Suffolk, Hampden, Bristol, Essex and Middlesex.

Unknown,	·76	1·80	1·39	10·71	11·10

In table 129 are presented the statistics relative to this class of deaths, by nativity and parent-nativity, by which it appears that 63·46 per cent. of the decedents were of native birth and 35·15 were foreign. The percentages for each sex differed but little from those of the total number.

Fifty-three and fifteen hundredths per cent. of the fathers of these decedents were of native and 36·14 per cent. were of foreign birth. The percentages of the mothers were very nearly the same.

Other Diseases of Special Sanitary Significance.

There are certain other diseases of a specific character, included in the general class which for many years has received the designation of zymotic diseases, which are worthy of special comment although they have but little influence upon the death-rate.

The number of persons recorded as having died of cholera in 1888 was 79. These cases must necessarily be regarded as deaths from *cholera morbus*, since Asiatic cholera has not appeared in Massachusetts since 1866.

Malarial Fevers. — From ague and remittent fever there were reported, in 1888, 64 deaths; of which number 34, or 53·1 per cent., occurred in the five western counties, having but 26 per cent. of the population. Of these, 10 occurred in Hampden County, 8 in Hampshire, 2 in Franklin, 7 in Worcester, and 7 in Berkshire. There were also 8 in Middlesex, 6 in Bristol, and 6 in Suffolk counties.

The numbers in other recent years, in the State, were as follows: in 1887, 46; in 1886, 32; in 1885, 56; in 1884, 31; in 1883, 75; in 1882, 42; in 1881, 29; and in 1880, 45.

Syphilis. — From this disease there were reported 48 deaths in 1888; of which number 42, or 87·5 per cent., occurred in Suffolk and Middlesex counties.

Hydrophobia. — Two deaths were reported from this disease; one occurred in Barnstable and the other in Bristol County.

Glanders. — There were no deaths from glanders in 1888.

Anthrax or Malignant Pustule. — There was one death from this disease in 1888, which occurred in Essex County.

In table 130 are presented the statistics of mortality from diarrhœal diseases for the three months of July, August and September, for a period of ten years (1879-1888). A brief meteorological summary is also appended for the same period.

The mortality-rate from these diseases, during the third quarter of 1888, was greater than that of 1887 or that of 1886 for the same period, but less than that of any previous year since 1879.

The mean temperature of these months was 67.5, which was greater than that of any previous year since 1882.

The mean barometer of the same months was 29.99, which was less than that of 1887 and less than that of 1886, but greater than that of either of the three previous years.

The mean humidity was less than that of 1887, and was the same as that of 1886.

The rain-fall was considerably greater than that of the same period in any of the previous nine years.

In tables 131 and 132 is presented a meteorological summary of the year 1888, together with the mean monthly temperature for a period of ten years (1879-1888).

MEDICAL EXAMINERS' RETURNS.

The returns of the Medical Examiners for the year 1888, made to the Secretary of State under the provisions of chapter 379, section 3 of the Acts of 1885, comprise the data of 1,649 deaths, the causes of which were made the subject of medico-legal inquiry by these officers.

The number of districts in the State at present is seventy-two.

During the year 1888 there were seventy-three Medical Examiners acting in these districts. There was one vacant district, the third in Dukes County, comprising the towns of Chilmark and Gay Head.

There were four deaths of Medical Examiners during the year, — Dr. James H. Waterman of the fourth Hampden district, Dr. Frederick Winsor of the second Middlesex district, Dr. Ira Russell of the second Worcester district, and Dr. Rowse R. Clarke of the seventh Worcester district; and there were two resignations, — Dr. Justin G. Hayes of the second Essex district and Dr. George G. Bulfinch of the eighth Worcester district.

Dr. James A. Shepard was appointed for the fourth Hampden district, Dr. William E. Tucker for the second Essex district, Dr. Daniel March of Winchester for the second Middlesex district, Dr. Edward A. Sawyer for the second Worcester district, Dr. George E. Bullard for the seventh Worcester district, and Dr. C. C. Bradford for the eighth Worcester district.

There were no deaths requiring the action of the Medical Examiners in the third district of Dukes County, the second district of Essex County and the tenth district of Worcester County; and consequently no returns were received from those counties.

From the returns of the Medical Examiners it appears that

the number of deaths from sudden, violent and suspicious causes which were examined by these officers was 1,649, or 93 more than those of the previous year. Of this number 1,261 were males and 373 were females, and the sex of the remaining 17 was unspecified, the latter being infants less than a week old.

The comparative data for the four years of registration were as follows :—

YEARS.	SEX.						Totals.
	Males.	Per Cent.	Females.	Per Cent.	Unspecified.	Per Cent.	
1885, .	973	76·1	286	22·4	19	1·5	1,278
1886, .	1,027	74·5	319	23·2	32	2·3	1,378
1887, .	1,191	76·5	350	22·5	15	1·0	1,556
1888, .	1,261	76·4	373	22·6	17	1·0	1,651
Totals,	4,452	75·9	1,328	22·6	83	1·4	5,863

The deaths from homicide were 52, or 3·15 per cent. of the whole number investigated in 1888, as compared with 52, or 3·34 per cent., in 1887, and 47, or 3·41 per cent., in 1886.

The deaths from suicide reported by the Medical Examiners in 1888 were 190, or 11·51 per cent. of the whole number, as compared with 173 deaths from the same cause in 1887, or 11·12 per cent., and 157 deaths in 1886, or 11·38 per cent.

From accident or negligence there were 785 cases, or 47·55 per cent. of the whole number, as compared with 748, or 48·07 per cent., in 1887, and 678, or 49·17 per cent., in 1886.

Recapitulation.

YEARS.	HOMICIDE.		SUICIDE.		ACCIDENT OR NEGLIGENCE.		NATURAL AND UN- KNOWN CAUSES, INCLUDING ALCO- HOLISM.		TOTALS.
	Number.	Per Cent.	Number.	Per Cent.	Number.	Per Cent.	Number.	Per Cent.	
1885, .	45	3·52	181	14·17	567	44·37	485	37·94	1,278
1886, .	47	3·41	157	11·38	678	49·17	496	36·00	1,378
1887, .	52	3·34	173	11·12	748	48·07	583	37·47	1,556
1888, .	52	3·15	190	11·51	785	47·55	624	37·79	1,651
Totals,	196	3·34	701	11·96	2,778	47·38	21·88	37·32	5,863

From all other causes, including alcoholism and various natural, as well as certain unknown or ill-defined, causes, usually of a sudden nature, or of a character liable to give rise to suspicion of violence, there were 624 deaths, or 37·79 per cent., as compared with 583, or 37·47 per cent., from the same class in 1887.

Homicide. — Of the whole number of deaths returned by the Medical Examiners as homicidal in 1888, 17 were by infanticide, 7 by abortion, 8 were by shooting, 3 by stabbing and other wounds, and 17 by blows and falls.

Suicide. — The number of deaths returned by the Medical Examiners as suicidal in 1888 was 190, of which number 45 were by shooting, 21 by cutting throat, 23 by drowning, 42 by hanging, 50 by poisoning, and 9 by other methods.

Of the 50 suicides by poisoning, 29 were by the different forms of arsenic, 12 by preparations of opium, and 9 by other poisons.

Arsenic as a poison was used in four different forms, — white arsenic, Paris green, “rough on rats” and rat dynamite; the two latter being quite similar in their character, and consisting of white arsenic mixed with coal dust or soot.

The number of suicides by arsenical poisoning was greater than that of any previous year except 1887.

Sex. — Of the 190 deaths reported as suicides, there were 146 males, or 76·8 per cent., and 44 females, or 23·2 per cent., as compared with 7·46 and 25·4 per cent. respectively in 1887, and 80·3 and 19·7 per cent. in 1886.

Of the 45 suicides by shooting, 42, or 93·3 per cent., were males. Of the 23 by drowning, 14, or 61· per cent., were males. Of the 42 by hanging, 35, or 83·3 per cent., were males; and of the 50 by poisoning, 32, or 64· per cent., were males.

In the two following tables are presented the statistics of suicide by counties in Massachusetts for a series of twenty years, in two ten-year periods (1869–1888).

Deaths from Suicide, by Counties, — 1879-1888.

COUNTIES.	1879.	1880.	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888.	TOTALS.	
											Numbers.	Ratios to Total Mortality per 1,000.
THE STATE, .	161	133	165	162	167	184	176	149	173	190	1,660	4.4
Barnstable, .	3	—	1	4	2	2	1	4	3	3	23	4.0
Berkshire, .	3	3	6	7	4	9	11	3	6	9	61	4.8
Bristol, .	11	6	13	10	10	13	12	10	10	11	106	3.4
Dukes, .	—	—	—	—	—	—	—	—	—	—	—	—
Essex, .	17	14	26	27	20	19	13	20	22	23	201	4.1
Franklin, .	4	5	3	—	1	8	3	5	3	5	37	6.0
Hampden, .	7	12	12	3	12	14	5	4	11	10	90	4.2
Hampshire, .	6	3	5	5	4	10	8	10	3	4	58	6.8
Middlesex, .	22	25	23	17	24	20	33	16	27	36	213	3.8
Nantucket, .	—	1	1	—	1	—	—	—	1	—	4	4
Norfolk, .	12	8	8	5	10	8	15	11	10	7	94	5.6
Plymouth, .	12	1	4	7	6	5	6	6	4	5	56	4.2
Suffolk, .	35	39	41	55	45	53	46	46	58	50	468	4.8
Worcester, .	29	16	22	22	28	23	23	14	15	27	219	5.0

By these statistics it appears that there was an increase in the ratio of deaths from this cause in the latter period, as compared with the former, not only in the State, as a whole, but also in nearly every county, the exceptions being Middlesex, Nantucket and Plymouth counties, in each of which there was a slight decrease. There were no suicides in Dukes County during the ten years (1879–1888).

The mortality from suicide in the different counties for the year 1888 presented the following order:—

Suffolk,	50	Norfolk,	7
Middlesex,	36	Plymouth,	5
Worcester,	27	Franklin,	5
Essex,	23	Hampshire,	4
Bristol,	11	Barnstable,	3
Hampden,	10	Dukes,	0
Berkshire,	9	Nantucket,	0

As compared with the living population in each county (Census of 1885), the order was as follows:—

Ratio of Suicides per 10,000 of the Living Population, 1888. (Census of 1885.)

Franklin,	1.33	Hampden,86
Berkshire,	1.22	Hampshire,82
Suffolk,	1.19	Bristol,69
Worcester,	1.11	Norfolk,68
Middlesex,	1.01	Plymouth,61
Barnstable,	1.00	Dukes,00
Essex,87	Nantucket,00

Accident or Negligence.—The deaths from these causes returned by the Medical Examiners were 785, of which number the principal modes of death were as follows:—

By fire-arms and other weapons, 12	By drowning,	243
elevators,	other forms of asphyxia, . .	24
other machinery,	poisons,	16
railroad accidents,	weather agencies: heat,	
horse railroads and other	cold, exposure, etc., . .	14
vehicles,	lightning,	3
burns, scalds and explosions, 30	other accidental causes, .	10
falls, blows and falling bodies, 104		

POINTS OF SPECIAL INTEREST IN THE RETURNS OF MEDICAL
EXAMINERS.

One death from electricity was reported at Lynn.

Three deaths occasioned by lightning were reported, in which there was no apparent evidence that the deceased were struck. Two of these were elderly women, aged 71 and 78 years, both of whom died in the same thunder-storm, in June, 1888, in the same town. The other case was that of a child of 10 months, in which no external marks were reported. In one of these cases the lightning struck an adjoining house to that in which the deceased child had lived.

There were two groups of deaths in which several persons lost their lives by accident, — one of these the burning of a building at Springfield, at which time eight persons died either by burning or by leaping from the burning building. In the other case twelve persons lost their lives by a railroad accident at Bradford, either at the time of the accident or within a few days afterward.

Alcoholism. — Intemperance from the use of alcoholic liquors is stated to have been the direct cause of death in 73 cases which came to the notice of the Medical Examiners, or 4.4 per cent. of the whole number, of which number 57 were men and 16 were women. All of these persons were between the ages of 20 and 70 years, and all of the women were between the ages of 20 and 60 years. There were many other cases in which the same cause produced a fatal result, either in the class of homicidal or suicidal or of accidental cases.

As a proof of the considerable share which the excessive use of alcohol contributes to the work of the Medical Examiner, the following list of brief selections is made from the reports of cases of 1888. It is probable that many more of the cases reported were due to the same cause, in which no allusion to this direct or indirect source of fatality was stated.

The extracts here given include only the essential particulars in each case; namely, sex, age, diagnosis or mode of death, and a clause stating the fact of intemperance or alcoholism, as having a direct or indirect connection with the case.

Homicidal Cases.

Male, 26. Fracture of skull and other injuries. "Engaged in a drunken row; was fatally beaten."

Female, 45. Injury of head. "Assaulted in a liquor-saloon; was the wife of the proprietor."

Male, 55. Homicide. "Both parties were probably under the influence of liquor."

Male, 23. Homicide by stabbing. "Near a bar-room. Odor of alcohol in the blood and lungs." Autopsy.

Male, 45. Homicide. Intra-cranial hemorrhage. "Assault by a bar-tender."

Suicidal Cases.

Male, 35. Suicide by drowning. "Overcome with grief at his last debauch and intemperate habits, he leaped from second-story window into river."

Male, 68. Suicide by drowning. "Lived unhappily with his second wife, and took to drink. Was seen in the street intoxicated, and soon after found in the river."

Male, 39. Suicide by pistol-shot. "Had been drinking freely for some time previous."

Male, 42. Suicide by pistol-shot. "Shot himself in the right ear. Was crazy drunk on cider."

Female, 40. Suicide by arsenic. "She had the snuff and alcohol habits."

Male, 37. Suicide by chloroform. "Was addicted to the inordinate use of alcohol."

Female, 60. Suicide by Paris green. "She had been drinking hard."

Male, 40. Suicide by "rough on rats." "Had been drinking hard."

Male, 64. Suicide by laudanum. "Was addicted to use of alcohol and opium. Whiskey and laudanum found on the stand near his bed."

Male, 42. Suicide by cutting throat. "While under the influence of liquor."

Male, 25. Suicide by shooting. "Despondent and drank heavily."

Male, 40. Suicide by shooting. "Was an inebriate. Had been drinking heavily."

Male, 52. Suicide by cutting throat. "Had been drinking hard for some days."

Male, 42. Suicide by hanging. "Depression following a week of drinking."

Male, 35. Suicide by shooting. "Temporary insanity from drink."

Male, 50. Suicide by drowning. "Had been drinking."

Male, 40. Suicide by shooting. "Had been away from home for some days drinking heavily."

Male, 26. Suicide by cutting throat. "Had been on a spree."

Male, 34. Suicide by laudanum. "Intemperate, having recently served a sentence for drunkenness."

Male, 48. Suicide by taking "rough on rats." "Intemperate and depressed."

Male, 26. Suicide by "rough on rats." "Threatened suicide when on his sprees."

Male, 68. Suicide by cutting his throat. "Intemperate; drank freely till three days before his death."

Male, 60. Suicide by cutting throat. "Intemperate, depressed."

Male, 40. Suicide by opium. "Stomach had the odor of alcohol and opium."

Male, 63. Suicide by arsenic. "Was addicted to drink."

Male, 32. Suicide by laudanum. "Drank heavily."

Male, 30. Suicide by "rough on rats." "Took a box of 'rough on rats' mixed in water. Had been drinking heavily."

Male, 50. Suicide by hanging. "Had been drinking heavily."

Male, 43. Suicide by hanging. "Very dissipated."

Male, 32. Drowning. "Jumped overboard while intoxicated."

Male, 40. Suicide by laudanum. "Had been drinking"

Accidental Deaths.

—, three weeks. Convulsions. "Found dead in bed at house of its grandparents, who had been in a drunken brawl there the day before its death."

Male, 59. Injury of head and fracture of ribs. "Intemperate; left a saloon and was found on the street unconscious. Knocked down by a wagon."

Male, 28. Burned. "An intemperate man; fell upon boilers in a sawmill and was roasted to death."

Male, 75. Horse-railroad accident. "Returning home from saloon with pail of beer in his hand, was struck by the horses or car on horse-car track."

Male, 19. Railroad accident. "A bar-tender, while endeavoring to steal a ride in a rapidly moving freight train, fell, striking the frozen ground."

Male, 55. Drowning. "Probably drowned in the night, while intoxicated."
"Known to be intoxicated."

Male, 45. Railroad accident. "Run over by engine and instantly killed." "They had evidently been drinking. His companion was also seriously injured."

Male, 55. Railroad accident. "Addicted to intemperance. Run over by express train and killed; broken whiskey-bottle found in his pocket, and clothes saturated with liquor."

Female, 65. Drowning. "Intoxicated; fell into the river and was drowned."

Male, 54. Exposure. "Died from exposure while intoxicated."

Male, 22. Drowning. "Had been drinking."

Male, 38. Drowning. "Drowned while swimming; had been drinking to some extent."

Male, 22. Fracture of skull. "Fell down stairs while intoxicated."

Male, 68. Drowning. "Wandered off a wharf while intoxicated."

Male, 50. Drowning. "Reputed to have been intoxicated."

Male, 42. Drowning. "Was intemperate in his habits."

Male, 26. Drowning. "A fisherman; in the boat was a whiskey-bottle one-third full."

Male, 47. Drowning. "Probably fell into the dock while intoxicated."

Male, 35. Drowning. "A man who drank a great deal; a bottle of rum was found in his pocket."

Female, 65. Injury of hip. "Thrown down by some man while drunk."

Male, 23. Railroad accident. "He was known to have been drinking, and there is no doubt that the accident was due to alcoholism."

Male, 50. Drowning. "An intemperate man. Body found floating in the water."

Male, 35. Drowning. "Body found floating in the water. It seems probable that he was intoxicated."

Male, 52. Railroad accident. "It seems probable that he was intoxicated."

Male, 60. Fall down stairs. "Of very intemperate habits."

Male, 22. Drowning. "An intemperate man."

Male, 50. Railroad accident. "Fell from train. Had been drinking."

Male, 38. Drowning. "Lost his balance while fishing, being somewhat intoxicated."

Male, 30. Railroad accident. "Was intoxicated the previous evening; evidently run over."

Male, 63. Drowning. "Went over the dam in a boat, while intoxicated."

Male, 19. Railroad accident. "After spending the evening in a saloon."

Male, 3 months. Suffocated. "Neighbors say the mother was drunk."

Female, 59. Burned. "Had been drinking freely through the day."

Male, 36. Railroad accident. "Was seen the night before, intoxicated."

Male, 49. Fall through a culvert. "The body smells of liquor."

Male, 60. Fall from wagon. "Fell from wagon while under influence of liquor."

Male, 50. Fall from railroad bridge. "Was seen intoxicated on previous evening."

Male, 30. Railroad accident. "Had been drinking and carousing for two days."

Male, 75. Drowning. "A bottle of new rum was found in the bottom of the boat."

Females, 25 and 30. Railroad accident. (Two sisters.) "There is a strong probability that these women were intoxicated."

Male, 35. Exposure. "A man of intemperate habits."

Male, 24. Railroad accident. "Had been seen shortly before under the influence of liquor."

Male, 25. Alcoholism and exposure to cold. "Examination of stomach showed presence of alcohol." Autopsy.

- Male, 29. Fall. "Fell from team while intoxicated, and broke his neck."
- Male, 30. Drowning. "Probably fell from a moving train while intoxicated."
- Male, 39. Burned. "Had been on a drunken spree for several days."
- Male, 38. Drowning. "Was seen intoxicated the afternoon before."
- Female, 33. Fall. "Drank heavily the day before her death."
- Female, 36. Accidental suffocation by fire. "Left in bed drunk, and found dead."
- Male, 30. Accidental drowning. "Had been drinking, and is supposed to have fallen overboard."
- Male, 50. Killed by railroad accident. "After a season of intemperate debauch."
- Male, 22. Railroad accident. "Fell under wheels of train, while intoxicated."
- Female, 45. Accidental poisoning. "Drank corrosive sublimate, thinking it was gin."
- Male, 55. Railroad accident. "Skull crushed in; a chronic inebriate."
- Male, 38. Accidental drowning. "Fell into a creek while returning home intoxicated."
- Male, 27. Accidental drowning. "Intemperate; presumed to have fallen overboard while intoxicated."
- Female, 29. Fall. "Intemperate; fell down stairs."
- Male, 34. Fall. "Was seen staggering drunk, and found lying on the sidewalk."
- Male, 30. Fall. "Fell on sidewalk in a drunken brawl, while intoxicated."
- Male, 35. Fall. "Was seen by police staggering drunk near the place where he was found."
- Male, 36. Accidental drowning. "Empty liquor-flask found in his pocket."
- Male, 68. Fall. Meningeal hemorrhage. "Got a drink of liquor, then dinner, then more liquor. Was intoxicated. Hat battered and dusty. Probably fell down stairs while drunk."
- Male, 26. Fall on sidewalk. "Was intoxicated."
- Male, 40. Fall on sidewalk. "Was supposed to be drunk."
- Female, 43. Fall. "Fell down stairs while drunk."
- Male, 30. Drowning. "A pint of whiskey in his pocket."
- Male, 36. Fractured skull. "Attended a wake, and was found apparently intoxicated on the street."
- Male, 30. Railroad accident. "Run over and killed while under the influence of liquor."
- Male, 60. Drowning. "Had spent the day in drinking."
- Male, 26. Drowning. "Fell overboard while drunk."
- Male, 37. Fracture of skull. "Arrested for drunkenness."
- Male, 27. Drowning. "Was last seen in a saloon, intoxicated."
- Male, 22. Railroad accident. "Was intoxicated and walking on the track."
- Male, —. Drowning. "Was intoxicated."
- Male, 42. Fall. "Fell from a roof while asleep and intoxicated."
- Male, 51. Overdose of laudanum. "Had used liquor to excess for a long time."
- Male, 33. Railroad accident. "Walking on the railroad-track while intoxicated."
- Male, 20. Drowning. "Was somewhat under the influence of liquor."
- Male, 24. Railroad accident. "Attempted to board a train while intoxicated."
- Male, 48. Drowning. "A habitual drinker."
- Male, 27. Freezing. "Frozen to death while in a state of intoxication."
- Male, 26. Drowning. "Intoxicated when last seen."
- Male, 54. Drowning. "Fell into the canal while intoxicated."
- Male, 35. Railroad accident. "Intoxicated and went to sleep on railroad-track. Was struck by train."
- Male, 20. Drowning. "Probably intoxicated."
- Male, 28. Railroad accident. "Had plenty of intoxicating liquor, and indulged freely in its use."
- Male, 39. Freezing. "Found dead in a field, frozen. Two pint bottles containing liquor were near him."
- Male, 32. Overdose of chloral. "Reported to have been drinking heavily."
- Male, 35. Fall from a tree. "Had a bottle of spirits."
- Female, 40. Delirium tremens. "Jumped from a window."

Other Deaths from Alcoholism and Intemperance.

Male, 64. Alcoholism. "Found dead, with a gallon jug containing a quart of rum by his side. Autopsy."

Male, 35. Alcoholism. "Died on board a vessel off Cape Cod, after a two weeks' drunk."

Male, 50. Alcoholic poisoning. "Has been under influence of liquor most of the time since Christmas." [Jan. 19.]

Male, 57. Degeneration of the heart. "Had been an intemperate man."

Male, 40. Alcoholic poisoning. "Was drunk the evening before his death."

Male, 59. Excessive use of alcohol. "Had been drinking excessively."

Female, 40. Alcoholism. "Found dead in an empty tenement; was of intemperate and dissolute habits."

Female, 25. Alcoholism. "Found dead in an empty tenement."

Male, 50. Intemperance. "Died in a saloon, while intoxicated."

Male, 17 months. Acute bronchitis. "Mother was intemperate."

Female, 22. Alcoholism. "A dissolute character. Autopsy: brain and liver showed a diseased condition, probably the result of alcoholic stimulants."

Male, 47. Heart disease. "Found dead in bed. Very intemperate."

Male, 39. Intemperance and exposure. "Found dead in out-house."

Female, —. Intemperance. "Death very sudden."

Male, 39. Heart disease. "Was addicted to alcohol."

Male, 64. Alcoholism and gastritis. "Had been on a prolonged spree."

Male, 43. Alcoholism and exposure. "Wandered off while suffering from delirium tremens, and was found dead in a swamp."

Female, 23. Cerebral congestion. "Lived unhappily; husband addicted to drink."

Male, 40. Alcoholism. "Was very intemperate."

Male, 54. Apoplexy. "Came home in evening intoxicated, and was found dead in bed."

Male, 38. Delirium tremens. "Had been drinking freely for ten days."

Male, 38. Delirium tremens. "Found by the roadside dead. Had been suffering from delirium tremens for a week."

Female, 42. Apoplexy. "Addicted to liquor."

Male, 60. Pneumonia and alcoholism. "Drank a pint of gin on the previous evening."

Female, 38. Heart disease. "She was in the habit of drinking."

Male, 45. Alcoholic poisoning. "Had been drinking, and was found dead in bed on the next morning."

Male, 42. Alcoholism. Paralysis of heart. "Found dead in stable; was a hard drinker. A bottle of whiskey, partly emptied, in his pocket."

Male, 27. Purpura hemorrhagica. "Bad habits and excessive drinking of alcoholic liquors."

Male, 70. Paralysis of heart. "From too frequent use of alcoholic stimulants."

Female, 35. Alcoholism. "Found dead on floor. Had been drinking very hard."

Male, 34. Exposure. "Found lying in the woods. Had been drinking for a number of days."

Male, 52. Probably alcoholism. "Found dead on a sofa. Was a hard drinker."

Male, 28. Probably alcoholism. "Found dead in bed. Was dissipated, and drank heavily on the day before his death."

Male, 23. Alcoholism and heart disease. "Found dead in bed. Drunk in the street, brought in by two men, and put to bed." Autopsy made.

Male, 63. Alcoholism. "Was intemperate."

Female, 50. Alcoholism. "Husband says she had been drinking for some days."

Female, 36. Alcoholism. "Found dead after a prolonged spree."

Female, 48. Alcoholic apoplexy. "Fell dead on the street after a prolonged drunk."

Male, 36. Heart failure, caused by alcoholism. "Had been drinking heavily for several hours."

- Female, 40. Heart disease. "House drunken and noisy."
- Female, 32. Heart disease. "Excessive use of alcohol."
- Male, 38. Alcoholism. "Found dead; was seen intoxicated on previous evening."
- Female, 35. Alcoholism. "Had a bad reputation for drunkenness; drank hard during the day preceding her death."
- Male, 26. Alcoholism. "Was a hard drinker, and had had delirium tremens."
- Male, 25. *Mania-à-potu* and exposure. "Wandered in the woods, evidently suffering from delirium tremens."
- Female, 46. Apoplexy. "Caused by alcoholism."
- Male, 50. Convulsions. "Had been drinking three or four days."
- Male, 48. Alcoholism. "Had been drinking for several days."
- Male, 23. Acute alcoholism and exposure. "Was seen on the previous afternoon intoxicated."
- Male, 37. Alcoholism. "He had been drinking hard for some days."
- Female, 58. Alcoholism. "This woman had been drinking to excess."
- Male, 32. Alcoholism. "Drank very freely."
- Male, 50. Alcoholism. "A heavy drinker."
- Male, 37. Alcoholism. "Very intemperate."
- Male, 50. Bright's disease. Found dying in bed by his wife. "Intemperate for many years."
- Male, 35. Pancreatic hemorrhage. "Found lying drunk in the street."
- Male, 29. Alcoholism. "Very intemperate; found dead, sitting in his chair."
- Male, 48. Alcoholism. "A chronic inebriate; very intemperate, hanging about liquor-saloons."
- Female, 35. Pancreatic hemorrhage. "Medical attendant supposed that drinking was the cause of her death."
- Male, 38. Chronic alcoholism. "Very intemperate. Found in an alleyway, and died on the way to hospital."
- Female, 65. Chronic nephritis. "Empty flask, smelling of liquor, found in her pocket."
- Male, 56. Found dead in a closet. "He was intemperate."
- Male, 5 months. "People so drunk that the attending physician could not ascertain facts as to death."
- Female, 30. Secondary pneumonia. "Found in an exhausted condition, and died. Supposed to have been a homeless inebriate."
- Male, 35. Phthisis. "Intemperate; had been drinking immoderately for several days."
- Female, 8 months. Diarrhœa and neglect. "Found dead, lying between its mother and grandmother, both of whom were drunk." "A bottle-fed child, contents of bottle disgustingly sour."
- Male, 40. Pneumonia. "Intemperate, shiftless and without a home. Out all night on the Common, and died before help reached him."
- Male, 34. Pancreatic hemorrhage. "Spent Labor Day in drinking liquor freely, went home, and was not seen alive again."
- Male, 45. Heart disease. "Intemperate."
- Male, 49. Heart disease. "Intemperate."
- Female, 39. Cancer of pancreas. "She was intemperate."
- Male, 29. Alcoholism. "Despondent, and had been drinking immoderately."
- Male, 35. Acute alcoholism. "Salesman in a liquor store; drank immoderately through the evening."
- Female, 26. Chronic alcoholism. "Had been drinking freely for several days."
- Female, 58. Chronic alcoholism. "A chronic inebriate, and the wife of a drunken husband."
- Male, 45. Chronic alcoholism. "Waiter in a saloon; known to be of intemperate habits."
- Male, 55. Chronic alcoholism. "Drunk every day for three weeks; found dead in bed."

- Female, 46. Chronic alcoholism. "Very intemperate; found dead on the floor."
 Female, 36. Chronic alcoholism. "A confirmed inebriate; drinking immoderately for four days."
 Male, 35. Chronic alcoholism. Was seen intoxicated a short time before death."
 Male, 48. Alcoholism. "Had been drinking heavily, and was found dead."
 Male, 60. Alcoholism. "A heavy drinker. Was found dead in bed."
 Male, 35. Chronic alcoholism. "Meningitis promoted by alcoholism."
 Male, 60. Alcoholism. "Strong odor of alcohol in stomach."
 Male, 30. Alcoholism. "A vagrant, found drunk."
 Male, 30. Alcoholism. "Found dead in cell at station-house."
 Male, 45. Apoplexy. "Said to have been a heavy drinker."
 Male, 50. Alcoholism. "His death was ascribed to alcohol."
 Female, 23. Edema of the lungs. "Arrested for intoxication."
 Female, 32. Congestion of the brain. "Had been drinking heavily."
 Male, 26. Convulsions. "After many days of hard drinking."
 Male, 32. Heart disease. "Was struck by a stranger in a saloon, and fell against a barrel."
 Male, 32. Congestion and œdema of the lungs. "Arrested for drunkenness."
 Female, 33. Alcoholism. "Arrested for drunkenness."
 Male, 55. Heart disease. "Was a periodical drinker."
 Male, 41. Heart disease. "Was a steady drinker."
 Female, 50. Alcoholism.
 Male, 23. Alcoholism. "Dissipated."
 Male, 63. Alcoholism. "Had been a hard drinker."
 Male, 24. Exhaustion. "Found dead. Appearances were characteristic of a confirmed inebriate." Autopsy.
 Male, 30. Alcoholism and exposure. "Found dead; was intoxicated the evening before, a jug containing rum found near him."
 Male, 30. Alcoholism. "Drinking heavily for some time."
 Male, 34. Alcoholism. "Had been drinking freely."
 Male, 50. Sunstroke. "Exposure to heat, and intemperate habits."
 Male, 55. Apoplexy. "Of intemperate habits."
 Male, 45. Apoplexy. "Put off from a train. Thought he was intoxicated."
 Male, 42. Found dead. "Had been on a spree"
 Female, 35. Hemorrhage. "Reported to have been drinking."

Summary.

Homicides, 5; Suicides, 31; Accidental cases, 91; Other deaths, 108. Total, 235.

The following illustrative cases are selected for publication:—

5. E. R., age 23. Alcoholism and heart disease.

The body of this man was found dead in bed. The people in the house say that he was drunk in the street, that he was brought into the house by two men and put to bed. The man that slept with him says R. was so cross and ugly that he left him and went to another room to sleep; about six or half-past six in the morning, some one spoke to R., and he said "he was not going to get up." About 9 o'clock A.M. he was found dead, as before mentioned. The circumstances under which the body was found, and the stories told relating to his death, made it seem a proper case for investigation. The autopsy was made by the authority of the mayor, in the presence of witnesses:—

Autopsy. Body that of a man five feet ten inches in height, weight about 160 pounds, eyes and hair black, pupils both alike. Rigor mortis well marked. There is a bloody streak on the right thigh and dried blood about the nostrils, also a bloody streak on the right side of the face, with no other external marks of violence.

On opening the chest and abdomen, the lungs are seen to fill the cavity of the chest;

there is a little bloody fluid in the pleural cavities. Pericardium normal in appearance. Heart a little larger than the right fist, normal in shape, of a bluish-red color, fairly firm; the auriculo-ventricular opening in left side admits three fingers; auriculo-ventricular opening in right side also admits three fingers. The cavities are distended with soft black clots; the coronary vessels are of normal size.

Lungs. The right is large and heavy. Left everywhere adherent by old and firm adhesions, the dependent parts are of a lighter color with lighter marblings; both lungs are crepitant. The cut surface of the lower lobe of the right lung is of a uniform blackish color, and the vessels are distended with blood; the upper lobe is of a reddish black color; a quantity of bloody material can be squeezed from the cut surface; the bronchi are smeared with bloody mucus. Peritoneum everywhere clear and glistening. Spleen is about three inches long and two inches wide, is of a bluish-red color and firm, and in section shows dark bluish-red color; follicles can be readily made out. Stomach is distended with gas, and contains about one half pint of substance smelling like sour beer; the external coat of stomach generally of a grayish appearance; dependent parts of the mucous membrane are of a reddish color, the other parts of a grayish-white color, and there are small spots of ecchymosis; the vessels can be seen as fine red lines. The mucous membrane of duodenum is of a dark reddish color.

Liver little larger than normal, and of a general bluish-black color; section of liver shows uniform dark bluish color, and vessels are immoderately full of blood. Gall-bladder moderately full of dark fluid bile. Pancreas and suprarenal capsules show nothing abnormal.

Kidneys are of a bluish color with lighter spots, very firm, capsule strips off readily, section shows whole cut surface of a bluish appearance, the cortex a little narrow, pelvis of right kidney a little dilated, otherwise like left (cyanosed). Bladder reaches nearly to umbilicus, and full of pale straw-colored urine. Cranium rather thin, diploe cannot be seen particularly on back part of head; all the tissues, particularly over top and side of the head, are of a reddish color; vessels immoderately full of blood; longitudinal sinus immoderately full of blood; hemisphere of brain both sides alike, cut surface shows nothing abnormal, no fluid in the ventricles, basal ganglia normal in appearance, cerebellum firm, and careful section shows nothing abnormal; vessels at base of brain are immoderately full of blood, base of skull every way normal in appearance.

4. T. J. C.; age, 20. Pistol shot of head.

On this day (5th) some trackwalkers on the ——— Railroad went into the grove opposite ——— station. There they found the body of C. shot through the head. The body was frozen and covered with a light fall of snow (of the 4th inst.). The hands with knuckles badly scraped rested by his side, his hat a short distance from his hand. In his lap was a silver-gilt framed mirror (1 foot by 8 inches), and this covered a (Challenge, 5 shot, 32 calibre) revolver with pearl handle. The handle was on *left* side of lap, and the muzzle, pointing up, was partly concealed by the vest on the right side. The weapon was rusty. The pistol contained four empty shells and one loaded, the latter being next to come under the hammer. There was blood on the leaves near the head, and leaves were stuck to the head by blood and frost. The man was at least twenty-four hours unshaven. Some change and a five-dollar note and a paper saturated with kerosene were found in outside overcoat pocket. The body was subsequently identified. The scraping of the hands, which at first appeared to be due to the body's having been dragged over frosty ground, was ascertained to be due to the ravages of field-mice. The man was known to have been around some of the questionable resorts at ——— some three days previously. Nothing more could be learned by the State police who were detailed on the case, and the presiding justice determined the case as one of suicide. It should be remarked that the man was not left-handed. There was a brown mark on throat from the Adam's apple to chin, due to strong pressure during life. The autopsy revealed nothing more than a pistol wound of brain, which extended through the right temple or just above, extending directly through brain. The skull on opposite side was fractured, and the ball, rebounding from this point, had lodged in the left lateral ventricle. There was a large amount of intra-cranial hemorrhage. The wound of entrance was blackened and the hairs and skin in immediate vicinity were burned.

18. S. M.; age, 79. Homicide. Acute meningitis and compression of brain.

This man, supposed to be in fair health, left his home Friday, May 25, 1888, and walked to —, a distance of three miles, to attend a circus. While at —, in the afternoon of the same day, he met with violence, to wit, an injury to his head, which from the time of its infliction was thought to be of a serious nature. On Wednesday, May 30, at 11 o'clock A.M., he died. M., a young man, was said to have inflicted the injury and has been taken into custody.

External Examination of Body.—I find an old man, five feet nine inches tall, thirty-three and one-half inches around chest and twenty-nine and one-half inches around abdomen. Post-mortem rigor well marked. Hair is dark and well preserved (no baldness). I find a porous plaster over left iliac region. The left leg is one inch shorter than right. The pupils are normal. The tissues about the right eye are a good deal discolored and there is effusion of blood into the eye. I find a contused wound upon the right side of the forehead in the region of the right frontal eminence. The wound is one inch long and extends upward and inward; it is one-half inch in breadth at one place. The skin around it is discolored. The lowest part of the wound is one and three-eighths inches above the upper margin of the orbit. The highest part is one-half inch from median line of the forehead. No other marks of violence are visible.

Internal Examination of Body.—Cranial cavity: Upon removal of scalp, I find a compound comminuted fracture of the skull with firmly fixed depression of the comminuted portion of bone. The seat of the fracture is in the region of the right frontal eminence and corresponds to the wound of the scalp above described. The size of the cup-shaped depression in the bone is seven-eighths of an inch transversely, by an inch perpendicularly, and, at the central part, is three-eighths of an inch in depth. From this depressed portion of bone the fracture extends downward to, and backward across, the orbital plate of the frontal bone. Upon removing the calvarium, I find the outline of the fracture upon the inner table of the skull is the same as upon the outer, excepting it is a little more extensive.

The dura mater (outer membrane of brain) is bathed in offensive pus over its entire extent upon the right hemisphere, and the pus extends slightly upon the left hemisphere also. There are found several small, dark, soft clots of blood about the wound. The pia mater (inner membrane of brain) is reddened over the right hemisphere, showing evidence of inflammatory action. The brain tissue throughout this side is somewhat reddened and congested, giving the same evidence. There is also an extensive effusion of bloody serum about the brain. All the other portions of the brain and its membranes are in a fairly healthy condition.

Thoracic cavity: I find extensive and firm pleuritic adhesions upon the right side and some upon the left. The upper lobe of each lung is in a fairly normal condition, but the lower lobes are hepatized and considerably softened. All the other organs and tissues in the cavity are fairly normal. The heart, in particular, with all its valvular arrangements, is perfectly normal.

Abdominal and pelvic cavities: I find the kidneys in a fair condition, but the right one has an adherent capsule and shows signs of inflammatory action at some time. All the other organs and parts of the body are carefully and minutely examined and found normal. The urine contains a small amount of albumen.

Conclusion: There was, probably, some bronchial inflammation and congestion of the lungs prior to the injury, but not enough to necessarily prove fatal, nor would it be likely to, though it might in time. The injury aggravated and hastened the lung trouble. The lung trouble did not, however, interfere with the healing process of the wound. The kidney trouble had little or nothing to do with the case. And I further declare it to be my opinion that the said M. came to his death from acute meningitis and compression of brain, caused by a fracture of the frontal bone.

Inquest: The Grand Jury held prisoner guilty for manslaughter. Case was tried in July, 1888, and prisoner was sentenced to fourteen years in State Prison.

28. M. M.; age, 16. Suicide by arsenic.

At about 11 P.M., March 6, took nearly a box full of "rough on rats." Motive obscure. She had repeatedly threatened suicide. Home difficulties and mental depression were

alleged. Typical symptoms (pain, vomiting, diarrhoea, intense thirst, delirium, collapse) followed ingestion of the poison. Died 6 A.M., March 7, at City Hospital.

Autopsy: Large patches of dull-blue lividity on dependent parts. A line of bright red along opposing parts of prolabia. Peritoneal vessels injected. Heart muscles pale and pliable; under endocardium of left ventricle two ecchymoses, each the size of a dime. Blood thin and dark. Lungs and bronchial mucosa injected. Kidneys of normal size; cortex very pale. Oesophagus normal. Gastric mucosa swollen; well-marked indications of hemorrhagic gastritis in all parts, most marked at pyloric end and posteriorly; dots, spots, lines and patches of reddening, particularly along summits of rugae. Duodenum slightly reddened internally; jejunum more red than other parts of intestinal tract. Colon and rectum empty and contracted; mucosa pale. Liver showed slight degree of fatty degeneration. Substance of brain showed marked injection of its vessels; over upper part of left hemisphere there was a thin layer of extravasated blood.

164. S. McK.; age, 45. Accidental poisoning with corrosive sublimate.

About 8 A.M., October 31, deceased swallowed two tablespoonfuls of a saturated solution of bichloride of mercury (bug poison), thinking it was gin, although the bottle was properly labelled. Symptoms immediate; epigastric pain, vomiting, great thirst, collapse. Treatment: egg albumen freely; vomiting provoked by apomorphia; ice ad lib.; milk. In hospital from 9.10 A.M., October 31, to 3 A.M., November 1, the hour of her death.

Autopsy: Buccal mucosa normal. Heart normal. Blood dark; clot in right side of heart. Lungs engorged; bronchial mucous membrane reddened and covered with blood-stained mucus. Kidneys small and rather pale, not fatty. Oesophagus pale, with long streaks of grayish deposit, firmly adherent; no sign of erosion or ulceration. Stomach externally showed subserous ecchymoses along its lesser curvature; elsewhere the surface showed a general uniform pink hue, with long red lines, radiating from lesser to greater curvature; internally, the gastric mucosa was thrown into long ridges, vivid red at the base and crowned at the summit by a reddish gray deposit, as if by scalding; mucosa between the rugae was pink. Contents, half-pint of fluid, fawn colored. Intestines injected outside, slight reddening within. Liver nutmeggy (passive congestion). Meningeal and cerebral vessels injected.

1. M. McW.; age, 20. Asphyxia from inhalation of coal-gas.

The deceased, in usual health, Saturday night, December 31, retired at 10.30 P.M. to sleep in a parlor upon a sofa drawn in front of and six feet distant from the stove. This parlor is a long room about 20 feet by 15 feet. The door communicating with the rest of the house was left open. The stove was a new one of the Seavy pattern, in which a coal fire was burning. It is not known in what condition the dampers were left. The other members of the family sleeping in adjoining rooms were more or less affected with nausea, vomiting and diarrhoea. The father and brother sleeping in the next bedroom, the door being open, continued ill throughout the next day.

The aunt discovered the deceased, apparently dead, soon after daylight. A doctor was called, but nothing was disturbed until the arrival of the medical examiner, who found the body lying upon the sofa in an easy position upon the back with head inclined a little to the right side. Hands crossed over the abdomen to the right. No appearance of any struggle. No marks of any violence on the surface of the body. A bunch of pinkish foam was exuding from the nostrils. Clothing saturated with a quantity of colored fluid which came from nostrils and mouth. Countenance not purple nor congested. Pupils moderately dilated. No foreign body in any of the external passages. Tongue slightly protruding between the teeth. Slight discoloration on back, neck and under side of legs.

Abdomen and Chest opened.—Vessels at base of neck filled with dark blood, which flowed as soon as they were cut. Pericardial sac contained about an ounce of fluid of normal appearance. Surface of lungs dark, mottled with bright red spots. Heart flaccid. Left ventricle empty. Right ventricle filled with dark fluid blood. Structure of heart normal. Right auricle filled with blood. No heart clots. Lungs normal in structure, and crepitant. Bloody fluid exuding from bronchial tubes.

Abdomen. — Omental vessels contained blood of bright vermilion color. Colon distended with gas. Stomach contained about two ounces of pinkish gruelly fluid.

Around its cardiac orifice dark injected spots. Intestines empty, mucous membrane normal. Uterus normal. Kidneys engorged with blood, normal in structure. Spleen normal and engorged with blood. Liver normal. Bladder empty. Ascending vena cava full of blood. Brain examined; vessels contained more blood than usual, otherwise normal.

6. I. R.; age, 25. Accidental poisoning by inhalation of illuminating gas.

R.'s body was found in bed in his bedroom early in the morning of June 11. The gas-cock in the room was turned on and the room contained gas in large amount. R.'s body lay in bed undressed in natural posture of sleep. He had left his wife where she was visiting friends, and had gone to their house in the evening of June 10, to open it preparatory to the return home. It is supposed that the loose-fitting gas-cock was accidentally turned on after the turning off when R. went to bed, and that he fell asleep before discovering the escape of gas into the room. The body showed no remarkable external appearance.

2. S. A. C.; age, 25. Poisoning with water-gas.

Found dead on the floor of his room. The pipe supplying a stove in the room with water-gas was broken, and the room was full of the gas. The gas which was used was supplied as fuel, and was not used for illuminating purposes. The room contained about 1,300 cubic feet of air-space. It was stated at the subsequent inquest that this gas contained about 35 per cent. of carbonic oxide. At an autopsy held twenty-two hours after death, some old pleuritic adhesions were discovered, but otherwise all the organs were healthy in structure. The blood was generally very bright red. The pia mater was injected. The lungs were engorged and very red. The muscles, also, were unusually red. The only dark blood found in the body was in the left ventricle of the heart. Inquest, and verdict of accidental death.

EXPENSES OF MEDICAL EXAMINATION FOR 1888.

The total expenses of the medical examinations for the year 1888, including the cost of registration, was \$19,611.53. The average cost of each of the 1,651 medical examinations was \$11.88. In Dukes, Franklin, Middlesex and Nantucket counties the expense was less, and in the remaining counties it was greater than that of the previous year.

The expenses of the four years 1885–1888 were as follows: —

YEAR.	Total Number of Cases Examined.	Autop- sies.	Total Expen- ses.	Average Ex- pense of Each Case.
1885,	1,260	165	\$16,322 54	\$12 95
1886,	1,378	202	18,024 22	13 08
1887,	1,556	188	18,626 26	11 97
1888,	1,651	219	19,611 53	11 88

In the following itemized table are presented the expenses of conducting the medical examinations in each county and for the whole State, for the year 1888.

APPENDIX.

LAWS CONCERNING THE REGISTRATION OF BIRTHS, MARRIAGES AND DEATHS.

[Public Statutes — Chapter 32.]

OF THE REGISTRY AND RETURN OF BIRTHS, MARRIAGES AND DEATHS.

SECTION 1. The clerk of each city and town shall receive or obtain, and record and index, the following facts concerning the births, marriages and deaths therein, separately numbering and recording the same in the order in which he receives them, designating in separate columns as follows: —

In the record of births, the date of birth, the place of birth, the name of the child, (if it has any,) the sex and color of the child, the names and the places of birth of the parents, the occupation of the father, the residence of the parents, and the date of the record.

In the record of marriages, the date of the marriage, the place of marriage, the name, residence, and official station of the person by whom married, the names and the places of birth of the parties, the residence of each, the age and color of each, the condition of each, (whether single or widowed,) the occupation, the names of the parents, and the date of the record.

In the record of deaths, the date of the death, the name of the deceased, the sex, the color, the condition, (whether single, widowed, or married,) the age, the residence, the occupation, the place of death, the place of birth, the names and places of birth of the parents, the disease or cause of death, the place of burial, and the date of the record.

SECT. 2. Parents shall give notice to the clerk of their city or town of the births and deaths of their children; every householder shall give like notice of every birth and death happening in his house; the eldest person next of kin shall give such notice of the death of his kindred; the keeper of a workhouse, house of correction, prison, hospital, or almshouse, except the state almshouse, and the master or other commanding officer of a ship, shall give like notice of every birth and death happening among the persons under his charge. Whoever neglects to give such notice for the space of six months after a birth or death shall forfeit a sum not exceeding five dollars.

SECT. 3. A physician who has attended a person during his last illness shall, when requested within fifteen days after the decease of

such person, forthwith furnish for registration a certificate of the duration of the last sickness, the disease of which the person died, and the date of his decease as nearly as he can state the same. If a physician refuses or neglects to make such certificate, he shall forfeit ten dollars to the use of the town in which he resides.

SECT. 4. Every sexton, undertaker, or other person having charge of a burial-ground, and every undertaker or superintendent of burials having charge of the funeral rites preliminary to the interment of a human body, shall forthwith obtain and return to the clerk of the city or town in which the deceased resided, or the death occurred, the facts required by this chapter to be recorded by said officer concerning the deceased, and the person making such return shall receive from his city or town the fee of twenty-five cents therefor.

SECT. 5. No human body shall be buried or removed from any city or town until a proper certificate has been given by the clerk or registrar to the undertaker, sexton, or other person performing the burial or removing the body. Such certificate shall state that the facts required by this chapter have been returned and recorded; and no clerk or registrar shall give such certificate or burial permit until the certificate of the cause of death has been obtained from the physician, if any, in attendance at the last sickness of the deceased, and placed in the hands of said clerk or registrar; and in cities and towns where there are boards of health, the certificate of the cause of death shall also be approved by such board before a permit to bury is given by the registrar or clerk. Upon application, the chairman of the board of health, or any physician employed by any city or town for such purpose, shall sign the certificate of the cause of death to the best of his knowledge and belief, if there has been no physician in attendance. He shall also sign such certificate, upon application, in case of death by dangerous contagious disease, or in any other event when the certificate of the attending physician cannot for good and sufficient reasons be early enough obtained. In case of death by violence, the medical examiner attending shall furnish the requisite medical certificate. Any person violating the provisions of this section shall be punished by fine not exceeding twenty-five dollars.

SECT. 6. The boards of health of towns and the mayor and aldermen of cities shall, on or before the first day of July in each year, license a suitable number of undertakers to take charge of the funeral rites preliminary to the interment of a human body.

SECT. 7. Physicians and midwives shall on or before the fifth day of each month report to the clerk of each city and town, except Boston, a correct list of all children born therein during the month next preceding at the birth of which they were present, stating the place and date of each birth, and the parents' names.

SECT. 8. The clerk of each city and town shall give public notice that he is prepared to furnish, to all physicians and midwives applying therefor, blanks for returns under the preceding section.

SECT. 9. Any physician or midwife neglecting to report such list for ten days after it is due shall for each offence forfeit a sum not exceeding twenty dollars.

SECT. 10. The clerk of each city and town shall annually, on or before the first day of March, transmit to the secretary of the com-

monwealth certified copies of the records of the births, marriages, and deaths which have occurred therein during the year ending on the last day of the preceding December.

SECT. 11. The record of the town clerk relative to a birth, marriage, or death, shall be *prima facie* evidence, in legal proceedings, of the facts recorded. A certificate, signed by the town clerk for the time being, shall be admissible as evidence of such record.

SECT. 12. The clerk of each city and town, (except in such cities and towns as choose a registrar, in which cases the provisions of this section shall apply to the registrar,) for receiving or obtaining, recording, indexing, and returning the facts relating to marriages, births, and deaths occurring therein, shall be entitled to receive from the city or town for each marriage, fifteen cents : for each birth, fifty cents ; for each death returned to him by the persons specified in sections two, three, and four, twenty cents for each of the first twenty entries, and ten cents for each subsequent entry ; for each death not so returned, but by him obtained and recorded, thirty-five cents, as the same shall be certified by the secretary of the commonwealth ; but a city or town containing more than ten thousand inhabitants may limit the aggregate compensation allowed to their clerk or registrar. He shall forfeit not less than twenty nor more than one hundred dollars for each refusal or neglect to perform any duty required of him by sections one, two, three, four, ten, twelve, fourteen, sixteen, and eighteen.

SECT. 13. The superintendent of the state almshouse shall obtain, record, and make return of the facts in relation to the births and deaths which occur in his institution, in like manner as is required of town clerks. The clerk of a town in which such almshouse is located shall, in relation to the births and deaths of persons in said almshouse, be exempt from the duties otherwise required of him by this chapter.

SECT. 14. The secretary shall at the expense of the commonwealth prepare and furnish to the clerks of the several cities and towns, and to the superintendent of the state almshouse, blank books of suitable quality and size to be used as books of record under this chapter, blank books for indexes thereto, and blank forms for returns, on paper of uniform size ; and shall accompany the same with such instructions and explanations as may be necessary and useful. City and town clerks shall make such distribution of blank forms of returns furnished by the secretary as he shall direct.

SECT. 15. The secretary shall cause the returns received by him for each year to be bound together in one or more volumes with indexes thereto. He shall prepare from the returns such tabular results as will render them of practical utility, make report thereof annually to the general court, and do all other acts necessary to carry into effect the provisions of this chapter.

SECT. 16. A city or town containing more than ten thousand inhabitants may choose a person other than the clerk to be registrar, who shall be sworn, and to whom all the provisions of this chapter concerning clerks shall apply. The returns and notices required to be made and given to clerks shall be made and given to such registrar under like penalties.

SECT. 17. The secretary of the commonwealth shall prosecute, by an action of tort in the name of the commonwealth, for the recovery of any penalty or forfeiture imposed by sections two, three, twelve, sixteen, and eighteen.

SECT. 18. A city or town may make rules and regulations to enforce the provisions of this chapter, or to secure a more perfect registration of births, marriages, and deaths therein.

[St. 1883, Chapter 124.]

AN ACT RELATING TO THE REMOVAL AND THE TRANSPORTATION OF CERTAIN BODIES FOR BURIAL.

Be it enacted, etc., as follows:

SECTION 1. Section five of chapter thirty-two of the Public Statutes, relating to the burial or removal of bodies for burial, is amended by inserting in the eleventh line thereof, after the word "bury," the words "or remove."

SECT. 2. No railroad corporation, or other common carrier or person, shall convey or cause to be conveyed, through or from any city or town in this commonwealth, the remains of any person who has died of small-pox, scarlet fever, diphtheria, or typhoid fever, until such body has been so encased and prepared as to preclude any danger of communicating the disease to others by its transportation; and no local registrar or clerk shall give a permit for the removal of such body until he has received from the board of health of the city, or the selectmen of the town where the death occurred, a certificate, stating the cause of death, and that said body has been prepared in the manner set forth in this section, which certificate shall be delivered to the agent or person who receives the body.

SECT. 3. This act shall take effect upon its passage. [*Approved April 11, 1885.*]

[St. 1887, Chapter 335.]

AN ACT IN ADDITION TO AN ACT RELATING TO THE REMOVAL AND TRANSPORTATION OF CERTAIN BODIES FOR BURIAL.

Be it enacted, etc., as follows:

Section two of chapter one hundred and twenty-four of the acts of the year eighteen hundred and eighty-three is hereby amended by adding at the end thereof the following words, namely:—Any person violating the provisions of this section shall be punished by fine, not exceeding twenty-five dollars. [*Approved May 31, 1887.*]

[St. 1888, Chapter 306.]

AN ACT RELATING TO THE CERTIFICATES AND REGISTRY OF DEATHS, AND THE BURIAL AND REMOVAL OF BODIES OF DECEASED PERSONS.

Be it enacted, etc., as follows:

SECTION 1. Section three of chapter thirty-two of the Public Statutes, requiring attending physicians to furnish for registration

certain facts relating to deceased persons, is amended so as to read as follows:—*Section 3.* A physician who has attended a person during his last illness shall, when requested, forthwith furnish for registration, a certificate stating, to the best of his knowledge and belief, the name of the deceased, his age, the disease of which he died, the duration of his last sickness, and the date of his decease. If a physician neglects or refuses to make a certificate as aforesaid, he shall be punished by a fine not exceeding fifty dollars.

SECT. 2. Section five of said chapter, prohibiting the burial or removal of a human body until a proper certificate is furnished, is amended so as to read as follows:—*Section 5.* No undertaker, sexton or other person shall bury in a city or town or remove therefrom the body of a deceased person until he has received a permit so to do from the board of health or its duly appointed agent, or, if there is no board of health in such city or town, from the city or town clerk. No such permit shall be issued until there has been delivered to such board, or agent or clerk, as the case may be, a satisfactory written statement containing the facts required by this chapter to be returned and recorded, together with the certificate of the attending physician, if any, as required by section three of this chapter, or in lieu thereof a certificate as hereinafter provided. If there is no attending physician, or if the certificate of the attending physician can not be obtained, for good and sufficient reasons, early enough for the purpose, the chairman of the board of health or any physician employed by a city or town for the purpose shall, upon request of said board, agent or clerk, make such certificate as is required of the attending physician; and in case of death by violence the medical examiner shall, if requested, make the same. When such satisfactory statement and certificate are delivered to the board of health or to its agent, the board or agent shall forthwith countersign and transmit the same to the clerk or registrar for registration. The person to whom the permit is so given shall thereafter furnish for registration any other information as to the deceased or to the manner and cause of the death, as the clerk or registrar may require. Any person violating any of the provisions of this section shall be punished by a fine not exceeding fifty dollars. [*Approved May 4, 1888.*]

[St. 1888, Chapter 63.]

AN ACT TO AMEND SECTION THREE OF CHAPTER THIRTY-TWO OF THE PUBLIC STATUTES RELATING TO THE FURNISHING, BY PHYSICIANS, OF CERTIFICATES OF DEATH.

Be it enacted, etc., as follows:

SECTION 1 Section three of chapter thirty-two of the Public Statutes is hereby amended by striking out after the words “when requested” in the second line thereof, the words “within fifteen days after the decease of such person”.

SECT. 2. This act shall take effect upon its passage. [*Approved February 27, 1888.*]

[St. 1883, Chapter 158.]

AN ACT IN RELATION TO THE RETURNS OF BIRTHS BY PHYSICIANS
AND MIDWIVES.*Be it enacted, etc., as follows :*

SECTION 1. Section seven of chapter thirty-two of the Public Statutes is amended so as to read as follows : "Section 7. Physicians and midwives shall, on or before the fifth day of each month, report to the clerk of each city or town, except Boston, a correct list of all children, born therein during the month next preceding, at whose birth they were present, stating the date and place of each birth, the name of the child (if it has any), the sex and color of the child, the name, place of birth and residence of the parents, and the occupation of the father. The fee of the physician or midwife shall be twenty-five cents for each birth so reported, and shall be paid by the city or town in which the report is made."

SECT. 2. This act shall take effect upon its passage. [*Approved May 3, 1883.*]

[St. 1887, Chapter 202.]

AN ACT IN RELATION TO THE RETURN AND RECORD OF BIRTHS
MARRIAGES AND DEATHS.*Be it enacted, etc., as follows :*

SECTION 1. Section five of chapter thirty-seven of the Public Statutes is hereby amended by inserting the word :— deaths,— after the word "births" in the fourth line thereof, so that the same shall read :— also any records of births, deaths and marriages kept by such city or town or by a parish within the same.

SECT. 2. Section four of chapter thirty-two of the Public Statutes is hereby amended by adding at the end thereof the words :— all such returns shall be preserved by said clerk or registrar, and filed, arranged and indexed conveniently for examination and reference.

SECT. 3. Section twenty-four of chapter one hundred and forty-five is hereby amended by adding at the end thereof the words :— all such returns shall be preserved by said clerk or registrar, and filed, arranged and indexed conveniently for examination and reference.

SECT. 4. The provisions of sections two and three of this act shall apply to all returns of marriages and deaths now in the offices of town and city clerks and city registrars.

SECT. 5. Section one of chapter thirty-two of the Public Statutes is hereby amended by inserting after the word "burial" in the twentieth line of said section, the words :— if the deceased was a married woman the name of her husband.

SECT. 6. This act shall take effect upon its passage. [*Approved April 20, 1887.*]

[St. 1889, Chapter 208.]

AN ACT IN RELATION TO THE RETURNS OF BIRTHS AND DEATHS.
Be it enacted, etc., as follows:

SECTION 1. The clerk or registrar of each city and town shall on the first day of each month make a certified copy of the record of all deaths and births recorded in the books of said city or town during the previous month, whenever the deceased person or the parents of the child born, were resident in any other city or town in this Commonwealth at the time of said death or birth; and shall transmit said certified copies to the clerk or registrar of the city or town in which such deceased person or parents were resident at the time of said death or birth, stating in addition the name of the street and number of the house, if any, where such deceased person or parents so resided, whenever the same can be ascertained; and the clerk or registrar so receiving such certified copies shall record the same in the books kept for recording deaths or births. Such certified copies shall be made upon blanks to be furnished for that purpose by the secretary of the Commonwealth.

SECT. 2. This act shall take effect upon its passage. [*Approved April 5, 1889.*]

[St. 1889, Chapter 224.]

AN ACT RELATING TO CERTIFICATES OF RETURNS OF DEATHS OF SOLDIERS AND SAILORS WHO SERVED IN THE WAR OF THE REBELLION.

Be it enacted, etc., as follows:

SECTION 1. A physician who has attended a person in his last illness in furnishing a certificate for the purposes of registration as required by section three of chapter thirty-two of the Public Statutes shall, in case the deceased was a soldier or a sailor who served in the war of the rebellion, give both the primary and the secondary or immediate cause of death as nearly as he can state the same. If a physician refuses or neglects to make such certificate he shall forfeit to the treasurer the sum of ten dollars for the use of the town in which he resides.

SECT. 2. This act shall take effect upon its passage. [*Approved April 8, 1889.*]

[St. 1889, Chapter 288.]

AN ACT IN RELATION TO THE RETURNS OF BIRTHS BY PHYSICIANS AND MIDWIVES.

Be it enacted, etc., as follows:

Section seven of chapter thirty-two of the Public Statutes, as amended by chapter one hundred and fifty-eight of the acts of the year eighteen hundred and eighty-three, is hereby further amended by striking out in the second and third lines of said section the words "except Boston", so as to read as follows:—*Section 7.* Physicians and midwives shall on or before the fifth day of each month report to the clerk of each city or town a correct list of all children born therein during the month next preceding, at whose birth they were present, stating the date and place of each birth, the name of the child (if it has any), the sex and color of the child, the name, place of birth and residence of the parents, and the occupation of the father. The fee of the physician or midwife shall be twenty-five cents for each birth so reported and shall be paid by the city or town in which the report is made. [*Approved April 26, 1889.*]

[Public Statutes, Chapter 145.]

OF MARRIAGE.

CERTAIN MARRIAGES PROHIBITED.

SECTION 1. No man shall marry his mother, grandmother, daughter, granddaughter, step-mother, sister, grandfather's wife, son's wife, grandson's wife, wife's mother, wife's grandmother, wife's daughter, wife's granddaughter, brother's daughter, sister's daughter, father's sister, or mother's sister.

SECT. 2. No woman shall marry her father, grandfather, son, grandson, step-father, brother, grandmother's husband, daughter's husband, granddaughter's husband, husband's father, husband's grandfather, husband's son, husband's grandson, brother's son, sister's son, father's brother, or mother's brother.

SECT. 3. In all cases in which the relationship mentioned in the two preceding sections is founded on marriage, the prohibition shall continue notwithstanding the dissolution by death or divorce of the marriage on which such relationship is founded, unless the divorce is for a cause which shows such marriage to have been originally unlawful or void.

SECT. 4. All marriages contracted while either of the parties has a former wife or husband living, except as is provided in chapter one hundred and forty-six, shall be void.

SECT. 5. No insane person or idiot shall be capable of contracting marriage.

SECT. 6. No magistrate or minister shall solemnize a marriage, when he has reasonable cause to suppose the male to be under the age of twenty-one years or the female to be under the age of eighteen years, except with the consent of the parent or guardian having the custody of the minor, if there is any such parent or guardian in the commonwealth competent to act.

SECT. 7. Every marriage, solemnized within this commonwealth, which is prohibited on account of consanguinity or affinity between the parties, or on account of either of them having a former wife or husband living, or when either party was insane or an idiot, shall be void without a decree of divorce or other legal process.

SECT. 8. Every marriage solemnized when either party was under the age of consent shall be similarly void, if the parties separate during such nonage, and do not afterwards cohabit.

SECT. 9. The validity of a marriage shall not be questioned in the trial of a collateral issue on account of the insanity or idiocy of either party, but such question shall only be raised in a process instituted to test such validity in the lifetime of both parties.

SECT. 10. When persons resident in this commonwealth, in order to evade any of the provisions of the first five sections of this chapter, and with an intention of returning to reside in this commonwealth, go into another state or country and there have their marriage solemnized, and afterwards return and reside here, the marriage shall be deemed void in this commonwealth.

SECT. 11. When the validity of a marriage is doubted, either party may file a libel for annulling such marriage, or, when the valid-

ity of a marriage is denied or doubted by either party, the other party may file a libel for affirming the same. Such libel shall be filed in the same manner as a libel for divorce, and all the provisions of chapter one hundred and forty-six relative to libels for divorce, and section twenty-four of said chapter relative to the powers of the court in relation thereto, shall, so far as applicable, apply to libels under this section. Upon proof of the nullity or validity of the marriage, it shall be declared void or affirmed by a decree of the court, and such decree of nullity may be made notwithstanding the marriage was solemnized out of the commonwealth, if the libellant had his domicile in the commonwealth when the marriage was solemnized and also when the libel was filed, and such decree affirming a marriage shall be conclusive upon all persons concerned.

LEGITIMACY, CARE, ETC., OF ISSUE OF VOID MARRIAGES.

SECT. 12. The issue of a marriage declared void on account of consanguinity or affinity between the parties shall be deemed to be illegitimate.

SECT. 13. The issue of a marriage declared void on account of the nonage, insanity, or idiocy of either party shall be deemed to be the legitimate issue of the parent who was capable of contracting the marriage.

SECT. 14. When a marriage is declared void on account of a prior marriage of either party, and it appears that the second marriage was contracted in good faith and with the full belief of the parties that the former husband or wife was dead, that fact shall be stated in the decree, and the issue of the second marriage, born or begotten before the commencement of the suit, shall be deemed to be the legitimate issue of the parent capable of contracting the marriage.

SECT. 15. Upon or after a decree of nullity the court shall have similar power to make orders concerning the care, custody and maintenance of the minor children of the parties as upon a decree of divorce.

NOTICE OF INTENTION OF MARRIAGE.

SECT. 16. Persons intending to be joined in marriage in this commonwealth shall before their marriage cause notice of their intention to be entered in the office of the clerk or registrar of the city or town in which they respectively dwell, or, if they do not dwell within the commonwealth, in the office of the clerk or registrar of the city or town in which they propose to have the marriage solemnized. If there is no such clerk or registrar in the place of their residence, the entry shall be made in an adjoining city or town.

SECT. 17. The clerk or registrar shall deliver to the parties a certificate under his hand, specifying the time when notice of the intention of marriage was entered with him, together with all facts in relation to the marriage which are required by law to be ascertained and recorded, except those respecting the person by whom the marriage is to be solemnized. Such certificate shall be delivered to the minister or magistrate before whom the marriage is to be contracted, before he proceeds to solemnize the same.

SECT. 18. If a clerk or registrar issues such certificate to a male under the age of twenty-one years, or to a female under the age of eighteen years, when he has reasonable cause to suppose the person to be under such age, except upon the application or consent in writing of the parent, master, or guardian of such person, he shall forfeit a sum not exceeding one hundred dollars; but if there is no parent, master, or guardian in this commonwealth competent to act, a certificate may be issued without such application or consent.

SECT. 19. The clerk or registrar may require of any person applying for such certificate an affidavit setting forth the age of the parties; which affidavit shall be sworn to before a justice of the peace, and shall be sufficient proof of age to authorize the issuing of the certificate.

SECT. 20. Whoever, when applying for such a certificate, wilfully makes a false statement in relation to the age, residence, parent, master, or guardian of either of the parties intending marriage, shall forfeit a sum not exceeding two hundred dollars.

SECT. 21. When a marriage is solemnized in another state between parties living in this commonwealth, and they return to dwell here, they shall within seven days after their return file with the clerk or registrar of the city or town where either of them lived at the time a certificate or declaration of their marriage, including the facts concerning marriages required by law; and for every neglect so to do they shall forfeit ten dollars.

BY WHOM AND HOW MARRIAGE MAY BE SOLEMNIZED.

SECT. 22. A marriage may be solemnized by a justice of the peace or by a minister of the gospel, ordained according to the usage of his denomination, who resides in the commonwealth and continues to perform the functions of his office; but every marriage shall be solemnized in the city or town in which the person solemnizing it resides, or in which one or both of the persons to be married reside.

SECT. 23. A marriage among the people called Friends or Quakers may be solemnized in the manner heretofore used and practised in their societies.

SECT. 24. Every justice of the peace, minister, and clerk or keeper of the records of a meeting wherein marriages among Friends or Quakers are solemnized, shall make a record of each marriage solemnized before him, or in such meeting, and of all facts relating to the marriage which are required by law to be recorded. He shall also, between the first and tenth days of each month, return a copy of all such records for the month next preceding to the clerk or registrar of the city or town in which the marriage was solemnized, and shall, when one or both of the parties to the marriage resided in a city or town other than that in which the marriage was solemnized, return a copy of the record of such marriage to the clerk or registrar of the city or town in which either party resided, and to the clerks or registrars of both cities or towns when the parties resided in different places. All marriages so returned shall be recorded by the clerk or registrar, and every person neglecting to make the returns required by this section shall forfeit for each neglect not less than twenty nor more than one hundred dollars.

SECT. 25. A justice of the peace or minister who joins persons in marriage contrary to the provisions of this chapter, knowing that the marriage is not duly authorized, shall forfeit not less than fifty nor more than one hundred dollars.

SECT. 26. Whoever undertakes to join persons in marriage, knowing that he is not authorized so to do, shall be imprisoned in the jail for a term not exceeding six months, or pay a fine of not less than fifty nor more than two hundred dollars.

SECT. 27. No marriage solemnized before a person professing to be a justice of the peace or a minister of the gospel, or solemnized in the society of Friends according to the usages of said society, shall be deemed or adjudged to be void, nor shall the validity thereof be in any way affected by want of jurisdiction or authority in such person or society, or by an omission or by informality in the manner of entering the intention of marriage, if the marriage is in other respects lawful, and is consummated with a full belief on the part of the persons so married, or of either of them, that they have been lawfully joined in marriage.

SECT. 28. Marriages solemnized in a foreign country by a consul or diplomatic agent of the United States shall be valid in this commonwealth.

EVIDENCE OF MARRIAGE.

SECT. 29. The record of a marriage, made and kept as prescribed by law by the person before whom the marriage has been solemnized, or by the clerk or registrar of a city or town, or a copy of such record duly certified, shall be received in all courts and places as presumptive evidence of such marriage.

SECT. 30. When a marriage has been solemnized by a consul or diplomatic agent of the United States, a copy of the record or a certificate from such consul or agent shall be presumptive evidence of such marriage.

SECT. 31. When the fact of marriage is required or offered to be proved before a court, evidence of the admission of such fact by the party against whom the process is instituted, or evidence of general repute or of cohabitation as married persons, or any other circumstantial or presumptive evidence from which the fact may be inferred, shall be competent.

[Public Statutes, Chapter 199.]

SECT. 17. For lawfully solemnizing and certifying a marriage, a minister or justice of the peace shall be entitled to receive one dollar and twenty-five cents.

LAWS CONCERNING DIVORCE.

[Public Statutes, Chapter 146.]

CAUSES FOR DIVORCE.

SECTION 1. A divorce from the bond of matrimony may be decreed for adultery, impotency, extreme cruelty, utter desertion continued for three consecutive years next prior to the filing of the libel, gross and confirmed habits of intoxication, cruel and abusive treatment, or, on the libel of the wife, when the husband, being of sufficient ability, grossly, or wantonly and cruelly refuses or neglects to provide suitable maintenance for her.

SECT. 2. Such divorce may also be decreed when either party has separated from the other without his or her consent and has united with a religious sect or society that professes to believe the relation of husband and wife void or unlawful, and has continued united with such sect or society for three years, refusing during that term to cohabit with the other party; or when either party has been sentenced to confinement at hard labor for life or for five years or more in the state prison or in a jail or house of correction; and after a divorce for such cause, no pardon granted to the party so sentenced shall restore such party to his or her conjugal rights.

SECT. 3. When a divorce from bed and board under laws heretofore in force or a divorce nisi has been decreed and the parties have lived separately for three consecutive years next after the decree, a divorce from the bonds of matrimony may be decreed upon the petition of the party in whose favor the previous decree was granted; and when the parties have lived separately for five consecutive years next after such decree, a divorce from the bond of matrimony may be decreed in favor of either party.

SECT. 4. Except as provided in the following section, no divorce shall be decreed if the parties have never lived together as husband and wife in the commonwealth; nor shall a divorce be decreed for a cause occurring in another state or country, unless, before such cause occurred, the parties had lived together as husband and wife in the commonwealth, and one of them lived in the commonwealth at the time when the cause occurred.

SECT. 5. When the libellant has resided in the commonwealth for five years next preceding the filing of the libel, or, if the parties were inhabitants of the commonwealth at the time of their marriage, when the libellant has been such an inhabitant for three years next preceding such filing, a divorce may be decreed for any cause allowed by law, whether it occurred in the commonwealth or elsewhere, unless it appears that the libellant has removed into the commonwealth for the purpose of obtaining a divorce.

LIBELS FOR DIVORCE.

SECT. 6. Libels for divorce shall be heard and determined in the supreme judicial court held for a county in which one of the parties lives, except that, when the libellant has left the county in which the parties have lived together, the adverse party still living therein, the libel shall be heard and determined in the court held for that county.

SECT. 7. Every such libel shall be signed by the libellant, if of sound mind and of legal age to consent to marriage; otherwise it may be signed by the guardian of the libellant or by a person admitted by the court to prosecute the libel as his or her next friend.

SECT. 8. The libel may be presented to the supreme judicial court or to a justice thereof in any county, in term time or vacation, or it may be filed in the office of the clerk of said court in vacation.

SECT. 9. The court, justice, or clerk may order the adverse party to be summoned to appear and answer at the court having jurisdiction of the cause, by the publication of the libel or of the substance thereof, with the order thereon, in one or more newspapers to be designated in the order, or by delivering to such party an attested copy of the libel and a summons, or in such other manner as may seem most proper and effectual; but when such order is made by a clerk, the court or any justice thereof may order such additional notice to be given as may seem proper.

* * * * *

SECT. 18. The court before which a libel for divorce is pending may, without entering a decree of divorce, cause the libel to be continued upon the docket from time to time, and during such continuance may make such orders and decrees concerning a temporary separation of the parties, the separate maintenance of the wife, and the custody and support of minor children, as in its judgment the interests of the parties and the necessities of the case demand, and such orders and decrees may be changed or annulled as the court may determine, and any orders or decrees of said court under this section shall, while they are in force, supersede any order or decree of the probate court under section thirty-three of chapter one hundred and forty-seven, and may suspend the right of said court to act under said section.

SECT. 19.* All decrees of divorce shall in the first instance be decrees nisi, to become absolute after the expiration of six months from the entry thereof, on application of either party to the clerk of the court, and on such application the clerk shall enter a final decree, unless the court has for sufficient cause, on application of any party interested, otherwise ordered.

SECT. 20. No libel for divorce on the ground of desertion shall be defeated by a temporary return or other act done by the party deserting, if it appears that such return or other act was not made or done in good faith, but with the intent to defeat the obtaining of a divorce by the other party.

RESUMPTION OF FORMER NAME BY WIFE.

SECT. 21. The court upon granting a divorce to a woman may allow her to resume her maiden name or the name of any former husband.

* Amended by chapter 223 on page 432.

RIGHT TO MARRY AGAIN.

SECT. 22. After a divorce from the bond of matrimony either party may marry again as if the other were dead, except that the party against whom the divorce was granted shall not marry within two years from the time of the entry of the final decree of divorce.

* * * * *

FOREIGN DIVORCES.

SECT. 41. A divorce decreed in another state or country according to the laws thereof, and by a court having jurisdiction of the cause and of both the parties, shall be valid and effectual in this commonwealth; but when an inhabitant of this commonwealth goes into another state or country to obtain a divorce for a cause which occurred here while the parties resided here, or for a cause which would not authorize a divorce by the laws of this commonwealth, a divorce so obtained shall be of no force or effect in this commonwealth.

CRIMINAL PROVISIONS.

SECT. 42. If persons divorced from the bond of matrimony cohabit as husband or wife or live together in the same house, they shall be deemed to be guilty of adultery.

* * * * *

[Stat. 1882, Chapter 194.]

AN ACT CONCERNING STATISTICS OF DIVORCE.

Be it enacted, etc., as follows:

SECTION 1. The clerks of courts for the several counties, and of the supreme judicial court for the county of Suffolk, shall, annually, during the month of February, make returns to the secretary of the Commonwealth in relation to libels for divorce in their respective counties for the calendar year next preceding. Such returns shall specify the following details: the number of libels pending at the beginning of the year; the number of libels filed within the year; the number of divorces granted; the number of divorces refused; the number of libels contested; the number of libels uncontested; the alleged cause for divorce in each case; the sex of the libellant and the length of time the parties have been married; and the number of cases in which notice has been given to the district-attorney for prosecution under section forty-four of chapter one hundred and forty-six of the Public Statutes, and the criminal offence for which divorce has been granted in such cases.

SECT. 2. The secretary shall furnish the said clerks of courts with suitable blank forms for the returns provided for in the preceding section.

SECT. 3. The secretary shall annually prepare from said returns full and complete abstracts and tabular statements of the facts relating to divorces for each county, and embody such abstracts and statements, with necessary analyses, in the annual reports to the legislature relating to the registry of births, deaths and marriages.

SECT. 4. The first return to be made under this act shall include the details specified in section one, so far as practicable, for the years

eighteen hundred and seventy-nine, eighteen hundred and eighty, eighteen hundred and eighty-one, and eighteen hundred and eighty-two.

SECT. 5. This act shall take effect upon its passage. [*Approved May 1, 1882.*]

[Stat. 1882, Chapter 223]

AN ACT RELATING TO THE MAKING AND ENTERING OF DECREES OF DIVORCE.

Be it enacted, etc., as follows:

SECTION 1. Section nineteen of chapter one hundred and forty-six of the Public Statutes is amended so as to read as follows: "Section 19. All decrees of divorce shall in the first instance be decrees *nisi*, to become absolute after the expiration of six months from the entry thereof, without further notice thereof by publication or otherwise, on application of either party to the court, or any justice thereof, in term time or vacation; and on such application the court or justice shall make a final decree, unless the court has for sufficient cause, on application of any party interested, otherwise ordered."

SECT. 2. This act shall take effect upon its passage. [*Approved May 15, 1882.*]

[Stat. 1884, Chapter 219.]

AN ACT RELATING TO DIVORCE IN CASES OF LONG AND UNEXPLAINED ABSENCE OF THE LIBELLE.

Be it enacted, etc., as follows:

SECTION 1. A divorce from the bond of matrimony may be decreed for any of the causes allowed by law, notwithstanding the fact that the libellee has been continuously absent for such a period of time and under such circumstances as would raise a presumption of death.

SECT. 2. This act shall take effect upon its passage. [*Approved May 8, 1884.*]

[Stat. 1887, Chapter 332.]

AN ACT TO ENLARGE THE JURISDICTION OF THE SUPERIOR AND PROBATE COURTS.

Be it enacted, etc., as follows:

SECTION 1. The superior court shall have exclusive original jurisdiction of all causes of divorce and nullity or validity of marriage, and in such proceedings shall have all powers as to alimony, the custody of children or otherwise which the supreme judicial court has heretofore had and exercised.

SECT. 2. The probate courts of the several counties shall have exclusive original jurisdiction of the petitions of married women concerning their separate estate, and of the petitions or applications concerning the care, custody, education and maintenance of minor children, provided for by sections thirty-one, thirty-two and thirty-six of chapter one hundred forty-seven of the Public Statutes.

SECT. 3. All appeals from orders, sentences, decrees or denials of probate courts on petitions brought under section thirty-three of chapter one hundred and forty-seven of the Public Statutes, and on petitions of married women concerning their separate estates, and on petitions concerning the care, custody, education and maintenance of minor children provided for by sections thirty-one, thirty-two and thirty-six of said chapter one hundred and forty-seven, shall hereafter be taken to the superior court, and all proceedings on such appeals shall be the same, so far as practicable as are now provided by law on like appeals to the supreme judicial court.

SECT. 4. The supreme judicial court as a court of law, shall continue to have and exercise the same jurisdiction on exceptions, report, or otherwise, of questions of law arising in all said matters in the superior court as it has heretofore had and exercised of such questions arising in the supreme judicial court.

SECT. 5. This act shall not affect any case pending in the supreme judicial court at the time when it takes effect.

SECT. 6. The superior court shall establish all necessary rules to regulate the practice under this act. [*Approved May 31, 1887.*]

[Stat. 1887, Chapter 320.]

AN ACT TO PROHIBIT ADVERTISING THE BUSINESS OF PROCURING DIVORCES.

Be it enacted, etc., as follows:

SECTION 1. Whoever writes, prints or publishes, or solicits another to write, print or publish, any notice, circular or advertisement soliciting employment in the business of procuring divorces, or offering inducements for the purpose of procuring such employment shall be punished by a fine not exceeding two hundred dollars or by imprisonment in the house of correction for a term not exceeding six months.

SECT. 2. The provisions of section one of this act shall not apply to any person duly admitted as an attorney-at-law in this Commonwealth. [*Approved May 27, 1887.*]

[Stat. 1889, Chapter 447.]

AN ACT TO PERMIT THE GRANTING OF DIVORCES IN CASES OF THE EXCESSIVE USE OF OPIUM OR OTHER DRUGS.

Be it enacted, etc., as follows:

A divorce from the bond of matrimony may be decreed for gross and confirmed drunkenness caused by the voluntary and excessive use of opium or other drugs. [*Approved June 7, 1889.*]

[Stat. 1885, Chapter 379.]

AN ACT RELATING TO MEDICAL EXAMINERS.

Be it enacted, etc., as follows:

SECTION 1. Section nine of chapter twenty-six of the Public Statutes is amended to read as follows:—*Section 9.* In the county of Suffolk each medical examiner shall receive from the treasurer of the county, in full for all services performed by him, a salary of three thousand dollars a year, and the associate medical examiner

a salary of five hundred dollars; but if the said associate medical examiner serves in any year more than two months, at the request of either medical examiner, he shall, for such service in excess of two months, be paid at the same rate as such medical examiner, and such compensation shall be deducted from the salary of the medical examiner in whose stead he serves. The medical examiners in other counties shall receive fees as follows: For a view without an autopsy, five dollars; for a view and autopsy, thirty dollars; and for travel, at the rate of ten cents a mile to and from the place of view.

SECT. 2. When a medical examiner deems it necessary to have a physician present at an autopsy as one of the witnesses, as provided in section eleven of chapter twenty-six of the Public Statutes, such physician shall be allowed five dollars for his services. Other witnesses required by law to be present at an autopsy shall be allowed two dollars each.

SECT. 3. Every medical examiner shall, annually, on or before the first day of March, transmit to the secretary of the commonwealth certified copies of the records of all deaths which have occurred during the year ending on the last day of the preceding December, the cause and manner of which he has investigated, in accordance with the requirements of chapter twenty-six of the Public Statutes: *provided, however*, if the term of office of any medical examiner shall end before the said last day of December, he shall send to the secretary of the commonwealth, within the sixty days next ensuing upon the expiration of his commission as a medical examiner, certified copies of the records of all deaths officially investigated by him during that part of the then current calendar year in which he continued in office.

SECT. 4. Each medical examiner shall be entitled to receive from the treasury of the commonwealth, for recording and returning the facts relating to deaths as herein provided, twenty cents for each of the first twenty entries, and ten cents for each subsequent entry in any year, as certified by the secretary of the commonwealth, and such allowance and payment shall be made to the medical examiners in Suffolk County for record and returns pursuant to this section, notwithstanding the limitation to the salary fixed by section nine of chapter twenty-six of the Public Statutes as amended by this act. Any medical examiner shall forfeit not less than ten nor more than fifty dollars for each refusal or neglect to fulfil the requirements of section three of this act.

SECT. 5. The secretary shall, at the expense of the commonwealth, prepare and furnish to the several medical examiners, blank books of suitable quality and size, to be used as books of record under this act, and blank forms for returns, on paper of uniform size.

SECT. 6. The secretary shall cause the returns received by him for each year, in accordance with this act, to be bound together in one volume, with indexes thereto; he shall prepare or cause to be prepared from the said returns such tabular results as will render them of practical utility, and shall make report thereof annually to the general court in connection with the report of the registry and return of births, marriages and deaths required by section fifteen of chapter thirty-two of the Public Statutes.

SECT. 7. Every medical examiner shall forthwith file with the district attorney of his district, a report of each autopsy made by him and of his view and personal inquiry in such case under the provisions of chapter twenty-six of the Public Statutes; and shall certify in such report that, in his judgment, the cause and manner of death could not be ascertained by view and inquiry, and that an autopsy was necessary for that purpose. The district attorney shall examine such report, and if of the opinion that such autopsy was necessary shall, except in the county of Suffolk, so certify to the county commissioners, having jurisdiction over the place where the autopsy is held, and no fee for any autopsy shall be certified by the commissioners for payment until such certificate by the district attorney shall have been filed with said commissioners.

SECT. 8. This act shall take effect upon its passage. [*Approved June 19, 1885.*]

[Stat. 1887, Chapter 310.]

AN ACT RELATING TO MEDICAL EXAMINERS.

Be it enacted, etc., as follows:

SECTION 1. Section twenty of chapter twenty-six of the Public Statutes is hereby amended to read as follows:—The medical examiner upon the completion of his autopsy in any case arising under the provisions of this chapter, or upon the conclusion of his view or medical examination when an autopsy is deemed unnecessary, shall deliver the dead body, upon their claim therefor, to one or more of the persons hereinafter named; and they shall be entitled thereto as follows:—First, the husband or wife, as the case may be. Second, the next of kin. Third, any friend of the deceased. But if the dead body is unidentified or unclaimed for a period of not less than forty-eight hours following the view thereof, the medical examiner shall deliver the body to the overseers of the poor of the city or town wherein it is found lying, and said overseers shall decently bury the same in accordance with the provisions of section seventeen of chapter eighty-four of the Public Statutes.

SECT. 2. Section twenty-four of chapter twenty-six of the Public Statutes is hereby amended so as to read as follows:—Every medical examiner shall return an account of the expenses of each view or autopsy, including his fees, to the county commissioners having jurisdiction over the place where the examination or view is held, or in the county of Suffolk to the auditor of the city of Boston, and shall annex to his return the written authority under which the autopsy was made. Such commissioners or auditor shall audit such accounts and certify to the treasurer of the county what items in such accounts are deemed just and reasonable and such items shall be paid by said treasurer to the person entitled to receive the same.

SECT. 3. Section seventeen of chapter eighty-four of the Public Statutes is hereby amended by striking out the words “except such strangers as are buried by medical examiners under the provisions of section twenty of chapter twenty-six.”

SECT. 4. This act shall take effect upon its passage. [*Approved May 26, 1887.*]

STATISTICAL NOSOLOGY.

ADOPTED FOR REGISTRATION IN MASSACHUSETTS.

The following plan of a Nomenclature and Classification of Diseases does not essentially differ from that authorized by the Registrar-General of England to be used in the preparation of the "Weekly Return of Births and Deaths in London," and is also, with slight modifications, identical with that embodied in a report drawn up by William Farr, Esq., M.D., of London, for the consideration of the International Statistical Congress which met at Paris in September, 1855; which report was printed in the Appendix to the Sixteenth Registration Report of the Registrar-General, England.

[NOTE.—This page and those that follow contain two lists of causes of death. The first—that on the left side—may be called the TABULAR LIST, and comprises all the heads which it is proposed to admit into the complete tables (IX. and X.), and under which ALL deaths, from whatever cause, are finally distributed. It represents those diseases which, under the same terms, or terms strictly synonymous with them, are found in practice to occur most frequently.

The SUPPLEMENTAL LIST is *subordinate* to the first, and contains the principal *special* diseases which it may be considered desirable to note. The figures in this list indicate the corresponding numbers of the tabular list under which such diseases are ultimately arranged.

Table VIII. includes both the Tabular and Supplemental lists; Tables IX. and X. the Tabular list only.]

CAUSES OF DEATH.

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS I.—ZYMOTIC DISEASES.	<i>Of Diseases of Special Character, or rarely fatal.</i>
ORDER 1.— <i>Miasmatic.</i>	
I. 1.—1. Small-pox 2. Measles 3. Scarlatina 4. Diphtheria 5. Cerebro-spinal Meningitis 6. Quinsy 7. Croup 8. Whooping Cough 9. Typhoid (and Infantile Fever) 10. Erysipelas 11. Metria (Puerperal Fever)	I. 1.—1. Vaccination not stated. Small-pox (second attack). After vaccination. Erysipelas, &c., after vaccination. Chicken-pox. Miliaria. 3. Angina maligna. 5. "Spotted fever." 6. Mumps. Tonsillitis. 9. Typhus fever. 10. Pyemia. Hospital gangrene. Erythema. 11. Childbed fever.

CAUSES OF DEATH — (CONTINUED).

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS I. — (CONTINUED.)	
ORDER 1. — <i>Miasmatic.</i>	
I. 1. — 12. Carbuncle 13. Influenza 14. Dysentery 15. Diarrhœa 16. Cholera Infantum 17. Cholera 18. Ague 19. Remittent Fever 20. Rheumatism	12. Anthrax. 18. Intermittent fever. 19. Yellow fever. 20. Rheumatism, with pericarditis, or disease of heart.
ORDER 2. — <i>Enthetic.</i>	
I. 2. — 1. Syphilis 2. Stricture of Urethra 3. Hydrophobia 4. Glanders 5. Malignant Pustule 6. Septicæmia	I. 2. — 1. Gonorrhœa. Purulent ophthalmia. 6. Necrosis (usually from dissection wounds).
ORDER 3. — <i>Dietic.</i>	
I. 3. — 1. Privation 2. Purpura and Scurvy 3. Delirium Tremens, } (Alcoholism) 4. Intemperance, }	I. 3. — 1. Want of breast milk. 2. Rickets. Bronchocele.
ORDER 4. — <i>Parasitic.</i>	
I. 4. — 1. Thrush 2. Worms, &c.	I. 4. — 2. Porrigo. Scabies. Tape worm. Hydatids. Trichiniasis.
CLASS II. — CONSTITUTIONAL DISEASES.	
ORDER 1. — <i>Diathetic.</i>	
II. 1. — 1. Gout 2. Dropsy 3. Anæmia 4. Cancer 5. Noma (Canker) 6. Mortification	II. 1. — 3. Leucocythæmia. 4. Soft cancer. Epithelioma. Sweeps' cancer. Melanosis. Other kinds of cancer. Polypus (part not stated). Lupus. 6. Bed-sore.
ORDER 2. — <i>Tubercular.</i>	
II. 2. — 1. Scrofula 2. Tabes Mesenterica 3. Phthisis (Consumption of Lungs) 4. Hydrocephalus	II. 2. — 1. Psoas (Lumbar) abscess. White swelling. Cretinism (Goitre). Adenitis, Cellulitis. 2. Tubercular peritonitis. 3. Hæmoptysis. 4. Tubercular meningitis.
CLASS III. — LOCAL DISEASES.	
ORDER 1. — <i>Nervous System.</i>	
III. 1. — 1. Cephalitis 2. Apoplexy 3. Paralysis 4. Insanity 5. Chorea 6. Epilepsy 7. Tetanus 8. Convulsions 9. <i>Brain Diseases,* &c.</i>	III. 1. — 1. Phrenitis. Myelitis. 4. Monomania. Fright. Grief. Melancholia. Rage. 6. Hysteria. 8. Laryngismus stridulus. 9. Neuralgia. Ophthalmia. Otitis. Dis. of spinal nerve. Necrencephalus (Ramollissement).

* Other diseases of the brain, or diseases of the nervous system, not otherwise distinguished, are referred to this head. *Mutatis mutandis*, the note applies to the corresponding heads in other orders of this class.

CAUSES OF DEATH — (CONTINUED).

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS III. — (CONTINUED.)	
ORDER 2. — <i>Organs of Circulation.</i>	
III. 2. — 1. Pericarditis* 2. Aneurism 3. <i>Heart Diseases, &c.</i>	III. 2. — 1. Carditis. Endocarditis. 3. Hypertrophia. Angina pectoris Syncope. Arteritis. Phlebitis. Hydropericardium.
ORDER 3. — <i>Respiratory Organs.</i>	
III. 3. — 1. Epistaxis 2. Laryngitis 3. Bronchitis 4. Pleurisy 5. Pneumonia 6. Asthma 7. <i>Lung Diseases, &c.</i>	III. 3. — 2. Œdema glottidis. 4. Empyema. Hydrothorax. Diaphragmitis. Pneumothorax. 5. Pulmonary apoplexy, 6. Grinders' asthma. Miners' asthma. Emphysema.
ORDER 4. — <i>Digestive Organs.</i>	
III. 4. — 1. Gastritis 2. Enteritis 3. Peritonitis 4. Ascites 5. Ulceration of Intestines 6. Hernia 7. Ileus 8. Intussusception 9. Stricture of Intestines 10. Fistula 11. <i>Stomach Disease, &c.</i> 12. <i>Pancreas Diseases, &c.</i> 13. Hepatitis 14. Jaundice 15. <i>Liver Disease, &c.</i> 16. <i>Spleen Disease, &c.</i>	III. 4. — 1. Glossitis. Stomatitis. Pharyngitis. Œsophagitis. 5. Perforation of — 6. Congenital. Femoral. Inguinal. Scrotal. Umbilical. Ventral. 7. Constipation. 9. Strict. œsophagus. 11. Dyspepsia. Pyrosis. Gastralgia. Hæmatemesis. Mæna. Hæmorrhoids. 14. Gall-stones. 15. Cirrhosis.
ORDER 5. — <i>Urinary Organs.</i>	
III. 5. — 1. Nephritis (Bright's Dis., &c.) 2. Ischuria 3. Diabetes 4. Calculus (Gravel, &c.) 5. Cystitis 6. <i>Kidney Disease, &c.</i>	III. 5. — 1. Albuminuria. 5. Cystirrhœa. 6. Diuresis. Hæmaturia. Dis. of prostate. Dis. of bladder.
ORDER 6. — <i>Generative Organs.</i>	
III. 6. — 1. Ovarian Dropsy 2. <i>Disease of Uterus, &c.</i>	III. 6. — 1. Ovarian tumor. 2. Hysteritis, Metritis (in Inflammation of womb). Uterine tumor, Polypus uteri. Orchitis. Hydrocele.

ORDER 5. — <i>Execution.</i>	
V. 5. — 1. Hanging	
Sudden, cause unascertained . . .	

NOTE.—Cases of "infantile fever" are classed with typhoid, relapsing and other continued fevers, under one name, "typhoid fever;" of "rheumatic fever," with "rheumatism;" of "hemorrhage," and "abscess," with the diseases of the part affected (if that is stated, as it should always be, in the return). As "stricture of the urethra" is almost invariably the result of gonorrhœa, it is classed as I. 2.—2. All cases of death returned "unknown," or of which the cause is not stated, and cases of "tumor," "inflammation," or "hemorrhage," of which the locality or part affected is not mentioned, are classed as unknown, and therefore not included in the foregoing table of specified causes.

* Manner stated.

† Manner not stated; return therefore imperfect.
